Compliance Information

For Customers in the European Union

This equipment displays the CE mark to indicate conformance to the following legislation:

- **EN 55022: Class A** - Emissions Standard for industrial environments
- **EN 61000-6-4** - Generic Emissions Standard for Heavy Industrial Environments
- **EN61000-3-2** - Harmonic Current Fluctuations
- **EN61000-3-3** - Voltage Fluctuation and Flicker
- **EN 55024** - Information Technology Equipment – Immunity characteristics - limits and methods of measurements
- **EN61000-6-2** - Immunity Characteristics for Industrial Environments

Following the provisions of **EU EMC Directive 2004/108/EC**
**EC Low Voltage Directive 2006/95/EC**
Essential health and safety requirements relating to electrical equipment designed for use within certain voltage limits.

- **IEC 60950-1(ed.2)**
- **EN60950-1**
Safety requirements for information technology equipment including electrical business equipment.

- **EN 60529**
Degrees of protection provided by enclosures (IP Code).

For Customers in the U.S.A.

This device complies with Part 15 of the FCC Rules. Operation is subject to the following two conditions: 1) this device may not cause harmful interference, and 2) this device must accept any interference received, including interference that may cause undesired operation.

**Warning**

Changes or modifications to this unit not expressly approved by the party responsible for compliance could void the user’s authority to operate the equipment.

This equipment has been tested and found to comply with the limits for a Class A digital device, pursuant to Part 15 of the FCC Rules. These limits are designed to provide responsible protection against harmful interference when the equipment is operated in a commercial environment.
environment. This equipment generates, uses, and can radiate radio frequency energy and, if not installed and used in accordance with the instruction manual, may cause harmful interference to radio communications. Operation of this equipment in a residential area is likely to cause harmful interference in which case the user will be required to correct the interference at his own expense.

Shielded cables must be used with this unit to ensure compliance with Class A FCC limits.

The user may find the following booklet prepared by the Federal Communications Commission helpful: How to Identify and Resolve Radio-TV Interference Problems. This booklet is available from the U.S. Government Printing Office, Washington, DC 20402, Stock No. 004-00-00345-4.

This equipment has been tested and certified for compliance with U.S. regulations regarding safety and electrical emissions by:

Electromagnetic Testing Services Limited
Pratts Fields
Lubberhedges Lane
Stebbing, Dunmow
Essex, CM6 3BT
England, UK

This equipment has been investigated by Underwriters Laboratories Inc. in accordance with the standard for safety: UL 60950-1: Safety of information technology equipment first edition. Subject 2178 marking and coding equipment, electronics.

Report reference E252185.

For Customers in Canada

This digital apparatus does not exceed the Class A limits for radio noise emissions from digital apparatus set out in the Radio Interference Regulations of the Canadian Department of Communications.

This equipment has been tested and certified for compliance with Canadian regulations regarding safety and electrical emissions by:

Electromagnetic Testing Services Limited
Pratts Fields
Lubberhedges Lane
Stebbing, Dunmow
Essex, CM6 3BT
England, UK

This equipment has been investigated by Underwriters Laboratories Incorporated in accordance with the standard for safety: CAN/CSA C22.2 No. 60950-1-03. Safety of information technology equipment. Subject 2178 marking and coding equipment, electronics.

Report reference E252185.

Pour la clientèle du Canada

Le present appareil numerique n’emet pas de bruits radioelectriques depassant les limites applicales aux appareils numerique de las class A prescrites dans le Reglement sur le brouillage radioelectrique edicte par le ministere des Communications du Canada.

Cet équipement est certifié CSA.

This equipment has been investigated by Underwriters Laboratories Incorporated in accordance with the standard for safety: CAN/CSA C22.2 No. 60950-1-03. Safety of information technology equipment. Subject 2178 marking and coding equipment, electronics.

Report reference E252185.

Warning

This product is not intended for use in the immediate/direct visual field of the display work place. To avoid disturbing reflections on the display work place, this product shall not be placed in the immediate/direct field of vision.
Customer Support and Training

Contact Information
If you have any questions or need assistance, please contact Videojet Technologies Inc. at 1-800-843-3610 (for all customers within the United States). Outside the U.S., customers should contact their Videojet Technologies Inc. distributor or subsidiary for assistance.

Videojet Technologies Inc.
1500 Mittel Boulevard
Wood Dale, IL 60191-1073 U.S.A.
Phone: 1-800-843-3610
Fax: 1-800-582-1343
International Fax: 630-616-3629

Service Program

About Total Source Commitment
Total Source® TOTAL SERVICE PLUS RELIABILITY, is the Videojet Technologies Inc. commitment to provide you - our customer - the complete service you deserve.

The Total Source Commitment
The Videojet Total Source® Service Program is an integral part of our business in providing marks, codes, and images where, when, and how often customers specify for packages, products, or printed materials. Our commitment includes:

• Applications support.
• Installation services.
• Maintenance training.
• Customer response center.
• Technical support.
• Field service.
• Extended hours phone assistance.
• Parts and supplies.
• Repair service.
Customer Training

If you wish to perform your own service and maintenance on the printer, Videojet Technologies Inc. highly recommends you complete a Customer Training Course on the printer.

*Note:* The manuals are intended to be supplements to (and not replacements for) Videojet Technologies Inc. Customer Training.

For more information on Videojet Technologies Inc. Customer Training Courses, call 1-800-843-3610 (within the United States only). Outside the U.S., customer should contact a Videojet subsidiary office or the local Videojet distributor for further information.

Glossary
Introduction

Videojet 1620/1620 UHS Printer

This printer is a continuous ink jet printer that can print fixed and variable codes at elevated line speeds on consumer and industrial products. The printer delivers superior uptime, excellent print quality, and ease of use to the users.

The 1620 HR printer is the UHS model with a 40 micron nozzle option. Refer to the specific UHS 40 micron information in the manual for variations to the standard 1620 series.

About the Manual

This Operator Manual is written for the every day user of the printer. The Operator Manual helps the user to understand the different parts and different printing operations of the printer.

Related Publications

The following manual is available for reference:

Language Codes

When you order these manuals, make sure to add the 2-digit language code at the end of the part number. For example, the Spanish version of the operator manual is part number 462269-04. Table 1-1 on page 1-2 shows the list of language codes that you can use to identify the translated versions of this manual.

Note: The availability of the Operator Manual is indicated by an asterisk (*). Availability of the Service Manual is indicated by a plus sign (+). For more information, contact the Videojet distributor or subsidiary.

Content Presentation

This Operator Manual contains different types of information like safety guidelines, additional notes, user interface (UI) terminology and so on. To help you identify the different types of information, different writing styles are used in this manual. This section describes these writing styles.

Positional References

Positions and directions like left, right, front, rear, to the right and to the left are with respect to the printer when you see from the front.

Units of Measurement

This manual uses metric units of measurement. The equivalent English measures are included in parenthesis. For example, 240 mm (9.44 inches).

Safety Information

The safety information includes warning and caution statements.

Warning

The warning statements indicate hazards or unsafe practices that can cause severe personal injury or death. For example:

⚠️ Warning

PERSONAL INJURY. The cleaning solution is poisonous if taken internally. Do not drink. Seek medical attention immediately if ingested.

Caution

The caution statements indicate hazards or unsafe practices that can cause damage to the equipment. For example:

⚠️ Caution

EQUIPMENT DAMAGE. Do not fit or remove any connector on the printer when the power is turned on. The failure to follow this caution can damage the printer.

Notes

Notes provide additional information about a particular topic.

For example:

Note: You can set the password protection for some functions to prevent any access that is not authorised.
User Interface Terminology

The UI elements are shown in italics. For example:

“Press Alt+M to select the Messages menu”. The word Messages is a UI element and is shown in italics (see Figure 1-1).

Figure 1-1. Menu Screen

The writing style used to indicate different keys on the control panel is shown in Table 1-2 on page 1-5.

Safety

Introduction

The policy of Videojet Technologies Inc. is to manufacture non-contact printing/coding systems and ink supplies that meet high standards of performance and reliability. We enforce strict quality control techniques to eliminate potential defects and hazards in our products.

The intended use of the printer is to print information directly onto a product. Use of this equipment in any other fashion may lead to serious personal injury.

The safety guidelines provided in this chapter are intended to educate the operators on all safety issues so that the printer is serviced and operated in a safe manner.

General Safety Guidelines

- Always refer to the correct service manuals as per the specific Videojet printer model for important details.
- Only Videojet-trained personnel must carry out installation and maintenance work. Any such work undertaken by unauthorized personnel may damage the printer and will invalidate the warranty.
- To avoid damage to the printer components, use only soft brushes and lint free cloths for cleaning. Do not use high pressure air, cotton waste, or abrasive materials.
- The printhead must be completely dry before attempting to start the printer, otherwise the printhead may get damaged.
- Do not fit or remove any connector on the printer when the power is turned on, otherwise the printer may get damaged.
Electrical Safety Guidelines

This section explains the safety guidelines related to electrical power supply and electrical cables.

Electrical Power Supply

Warning

PERSONAL INJURY. Lethal voltages are present within this equipment when it is connected to the mains electrical supply. Only trained and authorized personnel must carry out the maintenance work.

Warning

PERSONAL INJURY. Observe all statutory electrical safety codes and practices. Unless it is necessary to run the printer, disconnect the printer from the mains electrical supply before removing the covers or attempting any service or repair activity. Non-adherence to this warning can result in death or personal injury.

Warning

PERSONAL INJURY. A high AC voltage is present at the inverter and backlight. Extreme caution is required when diagnosing failure in these areas.
### Electrical Cables

**Warning**

PERSONAL INJURY. Use only the main power cable supplied with the printer. The end of this cable must have an approved, three-pole, main plug that has a protective ground conductor.

The electrical power cables, sockets and plugs must be kept clean and dry.

For pluggable equipment, the socket-outlet must be installed near the equipment and must be easily accessible.

---

**Warning**

PERSONAL INJURY. Always inspect the cables for damage, wear, corrosion, and deterioration. Make all grounding/bonding connections void of areas of paint, ink build-up, and corrosion.

---

### Grounding and Bonding

**Warning**

PERSONAL INJURY. The printer must be connected to an AC power supply that has a protective ground conductor and must be according to IEC requirements or applicable local regulations.

---

**Warning**

PERSONAL INJURY. Do not use the printer if there is any interruption in the protective ground conductor or if the protective ground conductor is disconnected. The failure to follow this warning can cause an electrical shock.
Warning

PERSONAL INJURY. Always ground conductive equipment to an earthing electrode or to the building grounding system with approved cables as per NEC standards in order to drain all potential static discharge. For example, a metal service tray to earth ground.

Warning

PERSONAL INJURY. A resistance reading from the grounded service tray to the equipment chassis or mounting bracket should be 0 to less than 1 ohm. A resistance check should be made using a safe and reliable ohmmeter and should be done on a frequent basis.

Warning

PERSONAL INJURY. The PCBs contain static sensitive devices. A suitably grounded, antistatic wrist strap must be worn when working on or handling PCBs.

Warning

PERSONAL INJURY. Always prevent static discharge from occurring. Use proper Grounding and Bonding methods. Only use Videojet approved metallic service trays and ground cables.

Warning

PERSONAL INJURY. Always bond conductive equipment together with approved cables to maintain them at the same potential and minimize static discharge. For example, printhead to metal service tray.
Warning

PERSONAL INJURY. The Optional Wash Station has been *solely* designed for the cleaning of the printhead.

Do not use it for purging or printing operations or for any other purposes.

Always ensure that the jet is stopped and that any hazardous voltages are switched off prior to the commencement of the printhead wash down.

Caution

EQUIPMENT DAMAGE. Always empty the service trays frequently. Some inks and cleaning solutions are flammable. Make sure that the waste fluids are disposed according to HAZMAT.

Fluid Safety Guidelines

This section describes the hazards that may occur while handling ink, make-up fluid, and cleaning solutions, and the safety precautions that a user must take to prevent the hazards.

Read the Material Safety Data Sheets

Read and understand the *Material Safety Data Sheet (MSDS)* before using any ink, make-up fluid, or cleaning solution. An MSDS exists for each type of ink, make-up fluid, and cleaning solution. For more information, visit www.videojet.com and navigate to *Documentation > Material Safety Data Sheets.*
Ink and Make-up Fluid

**Warning**

PERSONAL INJURY. The ink and make-up fluid are irritating to the eyes and respiratory system. To prevent personal injury when handling these substances:

Always wear protective clothing and rubber gloves.

Always wear goggles with side-shields or a face mask. It is also advisable to wear safety glasses when carrying out maintenance.

Apply barrier hand cream before handling ink.

If ink or make-up fluid contaminates the skin, wash immediately with soap water. DO NOT use washdown or solvent to clean ink stains from the skin.

**Warning**

PERSONAL INJURY. The ink and make-up fluid are volatile and highly flammable. They must be stored and handled in accordance with local regulations.

Do not smoke or use a naked flame in the vicinity of these substances.

Immediately after use, remove any tissue or cloth that becomes saturated with these substances. Dispose all such items in accordance with the local regulations.

In the event that any ink or make-up fluid container is not completely empty after use, it should be resealed. Only full bottles are recommended for use when replenishing ink or make-up fluid; partially filled bottles must be disposed in accordance with the local regulations.

**Warning**

PERSONAL INJURY. When setting up the nozzle, direct the ink stream into a beaker or suitable container. To avoid the contamination of the ink, do not re-use any ink collected in this way. Dispose all waste ink in accordance with the local regulations.
Warning

PERSONAL INJURY. Prolonged breathing of make-up fluid or cleaning fluid vapor may cause drowsiness and/or effects similar to alcoholic intoxication. Use only in open, well-ventilated areas.

Cleaning Solution

Warning

PERSONAL INJURY. The cleaning solution is poisonous if taken internally. Do not drink. Seek medical attention immediately if ingested.

Warning

PERSONAL INJURY. The cleaning solution is irritating to the eyes and respiratory system. To prevent personal injury when handling this substance:

Always wear protective rubber gloves and clothing.
Always wear goggles with side-shields or a face mask. It is also advisable to wear safety glasses when carrying out maintenance.
Apply barrier hand cream before handling ink.
If cleaning solution contaminates the skin, rinse off with running water for at least 15 minutes.

Warning

PERSONAL INJURY. The cleaning solution is volatile and highly flammable. It must be stored and handled in accordance with local regulations.

Do not smoke or use a naked flame in the vicinity of the cleaning solution.

Immediately after use remove any tissue or cloths that become saturated with cleaning solution. Dispose all such items in accordance with local regulations.
**Caution**

EQUIPMENT DAMAGE. Ensure that the cleaning solution is compatible with the ink used before carrying out printhead cleaning otherwise the printhead may get damaged.

---

**Caution**

EQUIPMENT DAMAGE. Any cleaning solutions containing either chloride, including hypochlorite bleaches or hydrochloric acid, can cause unacceptable surface pitting and staining. These should not be used in contact with stainless steels. If wire brushes or wire scouring pads are used, these should be made of stainless steel. Make sure that any abrasive media used is free from sources of contamination, especially iron and chlorides.

---

**Compressed Air Safety Guidelines**

**Warning**

PERSONAL INJURY. Airborne particles and substances are a health hazard. Do not use high pressure compressed air for cleaning purposes.
UI Related Safety Guidelines

Caution
DATA SECURITY. To prevent unauthorized access to the software, ensure that Clear Password is executed when exiting from a higher level password.

Caution
RISK OF DATA LOSS. Ensure the correct message name is selected for message deletion as no message selection confirmation prompt is given. All messages apart from the TEST MESSAGE will be deleted when you select the Delete All Messages option.

Caution
RISK OF DATA LOSS. The Delete User Field option does not ask for confirmation to delete a User Field.
Other Important Guidelines

Caution

EQUIPMENT DAMAGE. After a Quick Stop, the machine should not be left in this state for any length of time as drying ink may make restarting difficult.

Caution

EQUIPMENT DAMAGE. The printhead must be completely dry before attempting to start the printer otherwise the EHT will trip.

Warning

PERSONAL INJURY. If the battery is replaced by an incorrect type, it will lead to an explosion. Always dispose off the used batteries according to the instructions and local regulations.

Warning

PERSONAL INJURY. In a fault condition, heater can reach 70 °C. Do not touch the plate on which the heater is mounted. The failure to follow this warning can cause personal injury.
Main Parts

Videojet 1620/1620 UHS Printer

Figure 3-1: Main Parts of the Printer

1. Control Panel
2. Ink Compartment
3. Printhead
4. Umbilical
5. Connector Panel
6. Electronics Compartment*
7. Main Power Switch*
8. Back Filter*

*The components are not shown in the picture.
Control Panel

You can use the control panel (Figure 3-2) to do the following tasks:

• Start and stop the printer
• Create, edit, copy and delete the print messages
• Select a message to print
• Monitor the status of the printer
• Configure and control the printer functions

Note: You can set the password protection for some functions to prevent any access that is not authorised.

Note: Language specific keypads are provided with the language kits.

Figure 3-2: Control Panel
Status LEDs
The light emitting diodes (LEDs) (item 1, Figure 3-2 on page 3-2) indicate the system status.

Arrow Keys
The arrow keys (item 2) allow the operator to navigate through the software menus.

Keypad
The keypad (item 3) is 72 key, QWERTY, membrane type with tactile response keys. The solvents that you use for printing and maintenance do not damage the keypad.

Display
The Quarter Video Graphics Array (QVGA) Liquid Crystal Display (LCD) (item 5) has a resolution of 320 x 240 pixels. The LCD has an LED backlight to help you see in low light conditions.

Contrast Keys
The contrast keys (item 6) help the operator to increase or decrease the contrast of the LCD.
Function Keys

The following four function keys provide the basic printer controls (item 7):

<table>
<thead>
<tr>
<th>Key</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>f1</td>
<td>Start or stop the ink jet</td>
</tr>
<tr>
<td>f2</td>
<td>Select a message for printing</td>
</tr>
<tr>
<td>f3</td>
<td>To enter the password</td>
</tr>
<tr>
<td>f4</td>
<td>View and edit the messages</td>
</tr>
</tbody>
</table>

For more information on function keys and actions with CTRL and ALT, refer to “Soft Keys” on page 5-4.

Display Screen

The display screen displays the following elements.

Figure 3-3: Display Screen
The screen displays the following elements:

- The function key controls.
- The icons that indicate the printer status and fault conditions and the product counter*.

  *When the product counter is enabled, the screen displays the product counter.*

- The name and the content of the message. The content in the display is an accurate representation of what the printer prints on the product (WYSIWYG).
- The icons that indicate the fluid levels in the ink and make-up fluid cartridges.
- Ink type. For example: V501 A D.
Electronics Compartment

The electronics compartment contains the parts shown in Figure 3-4.

**Note:** When a customer orders a Videojet 1620/1620 UHS printer with an air dryer, the positive air pump is removed from the printer. The air dryer supplies positive air to the printhead from an external air source. Air dryers are required when the printer is operated in an environment with elevated humidity or where certain water sensitive inks are used. Please contact Videojet Technologies Inc. at 1-800-843-3610 (for all customers within the United States). Outside the U.S., customers should contact their Videojet Technologies Inc. distributor or subsidiary for assistance.

![Figure 3-4: Electronics Compartment](image-url)
Ink Compartment

The ink compartment of the printer contains the ink core module, and the smart ink and make-up fluid cartridges. The cooling fan cools the ink compartment and a filter does not allow the dust into the ink compartment.

Ink Core Module

The ink core module maintains the pressure and viscosity of the ink in the printer, and contains the following parts:

- Ink Module
- Ink Pump

*Note: The ink core module comes as a single unit. You cannot remove or replace any part inside the ink core module except the ink pump.

Figure 3-5: Ink Compartment

1. Ink Cartridge
2. Make-up fluid Cartridge
3. Ink Core Module
4. Ink Compartment Fan*
5. Gutter Pump*

*The components are not shown in the picture.
**Smart Cartridge**

*Note*: Refer to “Replace Smart Cartridges” on page 6-4 to replace the cartridges.

The smart cartridges use the smart chip technology to ensure the proper and in shelf-life ink and make-up fluids are used.

**Ink Compartment Fan**

The ink compartment fan cools the ink module and the ink pump.

**Printhead and Umbilical**

The printhead uses the ink supplied by the ink core module to print the text and graphic characters on a product. The control signals and ink are sent to the printhead through the umbilical.

![Figure 3-6: Printhead and Umbilical](image-url)
For Videojet 1620 Printer Only:

Note: The 90° printhead is not available for Videojet 1620 UHS printer.
Connector Panel

The connector panel is on the left side of the printer (item 5, Figure 3-1 on page 3-1). The panel contains the connectors shown in Figure 3-8 on page 3-11.

Note: The number of connectors provided depends on the model you select.

Table 3-1 provides the connectors for the printer.

Table 3-2: Connector Pinout Information

Main Power Switch

The main power switch (item 1, Figure 3-9) is a green push button to turn the printer on and off. You can find the main power switch on the right side of the printer.

Note: The handles (item 2) are provided for easy movement of the unit.

Figure 3-9: Main Power Switch
Back Filter

The ink compartment fan draws the air from the outside atmosphere to keep the ink compartment cool. The back filter removes the dust from the air that goes inside the ink compartment. IP65 back filter is standard for Videojet 1620/1620 UHS printer.

Figure 3-10: Back Filter (IP65 Version)
Introduction

This chapter provides the procedures to do the following tasks:

• Turn on the printer
• Clean start and stop the printer
• Set the passwords
• System menu
• Calibrate menu
• Data logging menu
• Product counter
• Run hours
• Configure serial port
• Configure ethernet port
• High speed remote data transfer
• Enter service information
• Create a message
• Printer configuration
• Print the messages
• Create custom fonts
• Turn off the printer

How to Turn on the Printer

Do the following tasks to turn on the printer:

1. Do the visual inspection.
2. Make sure that the electrical supply for the printer is available.
3. Press the main power switch to turn on the printer.
How to Clean Start and Stop the Printer

The default procedures to start and stop the printer are the Clean Start and the Clean Stop.

*Note:* If the Clean Start or the Clean Stop are not available, the printer requires a Quick Start or Quick Stop. The printer cannot provide the Clean Start and the Clean Stop options if the make-up fluid is empty or if the ink core level is high. Make sure that the make-up fluid is not empty or the ink core level is not high.

---

**Caution**

EQUIPMENT DAMAGE. Do not perform the Clean Start or the Clean Stop many times. The failure to follow this caution can cause high use of flush and dilution of the ink. The diluted ink decreases the quality of the print.

---

**How to Clean Start**

Press the *F1* key to start the jet start sequence.

The printer turns on the ink and the ink jet starts.

*Note:* To stop the ink jet, press the *F1* key.

**How to Clean Stop**

Press the *F1* key. The printer stops the flow of ink.
How to Set the Passwords

The passwords are set and configured from the Password menu in the UI.

The UI has the following access levels:

- The level 0 is the default password level.
- The levels 1 and 2 are password protected. The customer can configure the two levels. The customer can use the two levels to access different menus in the UI. To set the passwords for the two levels, you must access the system at same access level or one level higher.

Figure 4-1: Password Menu

How to Login for the First Time

Do the following tasks to login for the first time:

1. Open the Menu screen. The screen appears in level 0 with basic functions.

2. Press Alt+W. Select the Enter Password (see Figure 4-2) option and press the Enter key. The Enter Password screen appears (see Figure 4-3).

Figure 4-2: Enter Password

3. Log in at level 1 (default password = 1111) or level 2 (default password = 2222) password. The current password level changes to selected password level from level 0.

Figure 4-3: Level 0 Password
How to Set the Passwords for Levels 1 and 2

Do the following tasks to set the passwords for levels 1 and 2:

1. Press Alt+W and select Set Password for level 1 or Set Password for level 2 from the Password menu (see Figure 4-4). The New Password dialog box appears (see Figure 4-5).

![Figure 4-4: Set Password Level](image1)

2. Enter the new password and press the Enter key. A prompt appears where you confirm the password.

![Figure 4-5: New Password](image2)

3. Enter the new password again and press the Enter key.

   If the confirmation password is different from the first password entered, the Change Password dialog box appears (see Figure 4-7).

   Press Esc key to return to the New Password dialog box.

   Else, the new password is saved and the Menu screen appears.
How to Set the Password Levels for Menus

Do the following tasks to set the password levels for the menus available in the UI:

1. Press \textit{Alt+W} and select \textit{Set Password Levels} (see Figure 4-8) to open the \textit{Change Password Levels} screen (see Figure 4-9).

![Figure 4-8: Set Password Levels](image)

2. Select the menu (see Figure 4-9) that needs a change in the password level access and press the \textit{Enter} key. The \textit{Enter New Password Level} screen appears (see Figure 4-10 on page 4-6).

![Figure 4-9: Change Password Level](image)
3 Change the password levels for the different menus and press the Enter key to save the changes.

*Note:* The *Messages* menu is shown here as an example.

```
<table>
<thead>
<tr>
<th>Select</th>
<th>Level</th>
</tr>
</thead>
<tbody>
<tr>
<td>Print Message</td>
<td>1</td>
</tr>
<tr>
<td>Message Parameters</td>
<td>1</td>
</tr>
<tr>
<td>Default Parameters</td>
<td>2</td>
</tr>
<tr>
<td>Edit Message</td>
<td>1</td>
</tr>
<tr>
<td>New Message</td>

<tr>
<td>Edit External Select Table</td>
<td>2</td>
</tr>
<tr>
<td>Edit Barcode Scan Select Table</td>
<td>2</td>
</tr>
</tbody>
</table>
```

*Figure 4-10: Enter New Password Levels*

4 Press the Esc key to go to the menu screen.

**How to Access Other Password Levels**

Do the following tasks to access other password levels:

1 Press Alt+W and select the *Enter Password* option from the *Password* menu. The *Enter Password* dialog box appears (see Figure 4-11).

```
Enter Password
Current Password Level : 0
****
```

*Figure 4-11: Enter Password Dialog Box*

2 Enter the password for the feature level you must access. The current access level used is shown at the top of the dialog box.

You can use all the menu options that are set at this password level or below that level.
How to Clear the Password

Caution

RISK OF UNAUTHORIZED ACCESS. To prevent unauthorized access to the software, make sure that you do Clear Password when you exit from a higher level.

Press Alt+W and select Clear Password (see Figure 4-12) to clear the password for the access level used at this time and return to password level 0.

![Figure 4-12: Clear Password Option](image)

Note: The password is not deleted, but the user access is reset to the lowest privilege level from the current level.

Auto Logout

If this feature is enabled, the UI prompts for a password at level 0 and all access levels above level 0.

Press Alt+W. Select Auto Logout (see Figure 4-13) and press Enter. Use the Right or Left key to select Yes or No.

![Figure 4-13: Auto Logout Option](image)
System Menu

The user can perform the start and stop sequences through System menu (press Alt+S) (see Table 4-1).

| Alarms Screen                  | When the alarm messages appear on the screen, the printer stops the printing. The shortcut key ALT+ S and A allows the user to access the alarms screen.
| Current Alarms                | Note: Diagnostics screens can be accessed and scrolled through, by pressing i key on the keypad.
| EHT calibration required      | |
| Ink core service overdue     | |
| New Ink Core has a different ink reference. |

| Warnings Screen               | The printer continues the printing after the warning messages appear on the screen. The shortcut key ALT+ S and W allows the user to access the warnings screen.
| Current Warnings              | Note: Diagnostics screens can be accessed and scrolled through, by pressing i key on the keypad.
| Charge DAC not zeroed         | |
| Head temp too low             | |
| Ink cartridge expired         | |
| Ink insertions exceeded       | |
| Makeup cartridge expired      | |
| Makeup insertions exceeded    | |
| Viscosity not calibrated      | |

| States Screen                 | It displays the current states of the printer.
| Current States                | |
| Config files read             | |

Table 4-1: System Menu
Calibrate Menu

The *Calibrate* menu (press *Alt+L*) (see Table 4-2) includes the controls to setup and calibrate the printer. Refer to the service manual for more information. The *Diagnostics* screens are available from this menu at password Level 0 and above.

**Diagnostics Screens One, Two and Three**

Press *Esc* key to return to the Menu screen.

*Note:* *Diagnostics screens can be accessed and scrolled through, by pressing i key on the keypad.*

*Table 4-2: Calibration Menu*
Data Logging Menu

The Data Logging menu (press Alt+D) (see Figure 4-14) gives you access to the printer operation data and allows remote access to the data.

![Data Logging Menu](Figure 4-14: Data Logging Menu)

How to View Version Information

![Version Information](Figure 4-15: Version Information)

The Version Information (see Figure 4-15) gives the information on the following:

- Version of the software
- The date that the software was created
- Type of printhead engine
- Version of the printhead engine firmware
- CE image version
- CE image date
- CSB board issue
- Utilisation level - High+/High+ (for 1620)
  - High+UHS/High+UHS (for 1620 UHS)
Product Counter

The product counter shows the total number of products that the printer has detected. All detected products are counted here including the products on which the printer has not printed a message.

How to Reset the Product Counter

Do the following tasks to reset the product counter:

Note: If you reset the product counter then you cannot undo the operation.

1. Open the Data Logging menu (press Alt+D).
2. Select the Product Counter option from the Data Logging menu with the arrow key.
3. Press the Enter key to open the product counter dialog box (see Figure 4-16).
4. Set the Reset Counter field to “Yes” with the Left and Right arrow keys.
5. Press the Enter key to reset the product counter and exit the Product Counter dialog box.

How to Hide the Product Counter

Do the following to hide the product counter:

1. Set the Display it? field to “No” with the Left and Right arrow keys.
2. Press the Enter key to hide the product counter and exit the Product Counter dialog box.
Run Hours

How to View Run Hours

To see the number of hours that the ink core, printer and ink pump have run:

1. Select View Ink Core Smart Chip Data from Calibrate menu (Figure 4-17) to view the ink core run hours. The ink core run hours is reset only after ink core change.

![Figure 4-17: View Ink Core Smart Chip Data](image)

2. Press any key to close the Run Hours dialog box and return to the Menu screen.

![Figure 4-18: View Machine Run Hours](image)
How to Reset Run Hours

The running hours must be reset only under special conditions like the ink pump replacement and trained service personnel only must perform this operation.

![Figure 4-19: Reset Run Hours](image)

How to Configure the Serial Port

The RS-232 and RS-485 serial communication ports are standard for Videojet 1620/1620 UHS printer. For more information, contact the Videojet distributor or subsidiary.

You can prepare the printer communication ports for the transmission of data logging information between the port and a remote device.

1. Open the **Configure** menu (press Alt+C).

![Figure 4-20: Configure Menu](image)
2 Select *Serial Port Configuration* option, and press the *Enter* key. The *Configure Serial Ports* dialog box appears (see Figure 4-21).

![Configure Serial Ports Dialog Box](image)

**Figure 4-21: Configure Serial Ports Dialog Box**

3 You can configure the following settings:

<table>
<thead>
<tr>
<th>Parameter</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Baud Rate</td>
<td>Sets the baud rate for transmission to remote devices</td>
</tr>
<tr>
<td>Data Bits</td>
<td>Sets the number of bits used in a data word</td>
</tr>
<tr>
<td>Stop Bits</td>
<td>Sets the number of stop bits used in a data word</td>
</tr>
<tr>
<td>Parity</td>
<td>Select Odd parity, Even parity or No parity for error detection within data transmission</td>
</tr>
</tbody>
</table>

4 Press the *Enter* key, when you complete the port configuration.

### How to Configure Ethernet Port

Refer to WSI/ESI Communications Protocol addendum for more information.
High Speed Remote Data Transfer

You can use the printer in applications that require high speed data transfer. For example, gaming applications. The printer has a data buffer to store a stack of information before you transfer data (WSI full protocol or ESI protocol) without any loss.

<table>
<thead>
<tr>
<th>Parameter</th>
<th>Value</th>
</tr>
</thead>
<tbody>
<tr>
<td>Buffer size</td>
<td>200 messages</td>
</tr>
<tr>
<td>Print rate</td>
<td>44 messages per second</td>
</tr>
<tr>
<td>Protocol</td>
<td>WSI full protocol or ESI protocol</td>
</tr>
<tr>
<td>Insert Mode</td>
<td>Send variable data. You can have 10 remote data inserts in a single message.</td>
</tr>
<tr>
<td>Alerts</td>
<td>Buffer full (70% of the total size of the buffer is reached)</td>
</tr>
<tr>
<td></td>
<td>Buffer overfill (90% of the total size of the buffer is reached)</td>
</tr>
<tr>
<td></td>
<td>Buffer full cleared (when the size of the buffer reaches 40% of buffer size after a buffer full)</td>
</tr>
<tr>
<td></td>
<td>Communication error</td>
</tr>
<tr>
<td>Commands</td>
<td>Clear buffer (internal)</td>
</tr>
<tr>
<td></td>
<td>Message Repeat - The printer continues to print the last message when it reaches the end of the buffer</td>
</tr>
<tr>
<td></td>
<td>No Message Repeat - The printer stops the print when it reaches the end of the buffer.</td>
</tr>
</tbody>
</table>

*Table 4-3: High Speed Data Transfer*
How to Enter Service Information

You can record the service information on the printer.

![Figure 4-22: Enter Service Information]

2. Select the Enter Service Information option and press the Enter key. The Enter Service Information dialog box appears (see Figure 4-23).

![Figure 4-23: Enter Service Information Dialog Box]

3. Enter the following information in the fields:

<table>
<thead>
<tr>
<th>Field</th>
<th>Entry</th>
</tr>
</thead>
<tbody>
<tr>
<td>Printer Location</td>
<td>A correct name of location (For example, factory name and machine number).</td>
</tr>
<tr>
<td>Customer Name</td>
<td>The name of your company.</td>
</tr>
<tr>
<td>Address</td>
<td>Complete postal address of the printer location.</td>
</tr>
<tr>
<td>Serial Number</td>
<td>Enter the serial number of the printer.</td>
</tr>
<tr>
<td>Service Centre (Voice)</td>
<td>The full telephone number of your local Videojet service centre.</td>
</tr>
</tbody>
</table>

4. Press the Enter key after you enter the required information.
How to Create a Message

Refer to “To Create a Message” on page 5-24 for more information.

Printer Configuration

The printer is configured through the Print menu (see Figure 4-24). Press Alt+P to open the Print menu.

Figure 4-24: Print Menu

Print Enable

Select the Print Enable option from the Print menu. The Print Control menu (see Figure 4-25) appears. Or, press ALT+F1 to start the printing.

Table 4-4 describes the options in the Print Control menu.

Figure 4-25: Print Control Menu

Table 4-4 describes the options in the Print Control menu.
<table>
<thead>
<tr>
<th>Feature</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Print</td>
<td>Enable or Disable the printing.</td>
</tr>
</tbody>
</table>
| Double Buffering        | The double buffering setting is ON by default. Enable double buffering to print without product delay. Disable double buffering if an external host controls the printing to prevent print delay. Disable this feature during the following modes: Special Print mode, External Message Select and Auto Encoder.  
**Note:** When double buffering is off, delay is needed to build image. Print warnings should be enabled to aid in printer setup. |
| Shaft Encoder Source    | Set the shaft encoder to Internal option for a fixed line speed. Set to External option for use with a compatible shaft encoder where the line speed is variable.  
**Note:** If external shaft encoder is selected, the user has to also enter the encoder type (non-quadrature, A then B, or B then A).  
Set to Auto Encoder for use when speed of the product changes, because the product slips on the conveyor. |
| Photocell Source        | The print is activated from the source External 1 (standard-connection option), or External 2.  
**Note:** An option of "None" is also available in the Photocell Source field. |
| Print Acknowledge       | Sends a signal to an external control system (normally through the connector COMM1). There are two options.  
1. Off The print acknowledge signal is not sent.  
2. After Compile After the update of any dynamic information like Clock Codes or counter information in the message is printed, the print acknowledge character is sent. |
| Print ACK ASCII code    | Sets the ASCII character code (0 to 255) sent to the control system.                                                                                                                                 |
| Throw distance          | You must enter the distance that is set between the printhead and the product.                                                                                                                               |
| Remote Source Action    | Provides instructions to the printer when the record buffer runs out of data:  
- Clear buffer  
- Message repeat desired – the printer will continue to print the last message when it reaches the end of the buffer.  
- Message repeat not desired – the printer will stop the print when it reaches the end of the buffer. |

*Table 4-4: Print Control Menu*
Manual Print Option

Select Manual Print (see Figure 4-24 on page 4-17) from the Print menu if you do not require to start the printing from an external source. When you give the print command, the printer prints one copy of the message.

How to Use Continuous Print Option

If you enable the Continuous Print (see Figure 4-24 on page 4-17) mode, the message is printed repeatedly. The message is printed if only the input of product detect is enabled. When you must print the messages at correct and regular intervals of time on continuous products, this option is useful.

1 Select Continuous Print from the Print Menu. The Continuous Print dialog box appears (see Figure 4-26).

2 Select PEC Triggered. This allows you to see the rising or falling edge on the photocell to start the print.

   **Note:** If you enable the PEC Triggered option, the printer must get a leading or trailing edge (of the product) signal from the photocell to start the print.

3 Or, select PEC Gated. This allows you to see a steady signal (i.e. substrate) to keep printing.

   **Note:** If you enable the PEC Gated, the printer must get a continuous signal to continue the printing.

<table>
<thead>
<tr>
<th>Print Complete Width</th>
<th>Enter the print complete width in meters.</th>
</tr>
</thead>
</table>

*Table 4-4: Print Control Menu (Continued)*

![Continuous Print Dialog Box](image)

*Figure 4-26: Continuous Print Dialog Box*
4 Set the SE Mode delay to use external shaft encoder pulses to set the distance between the start of each print.

Figure 4-27: SE Mode

5 If there is no external shaft encoder, set Time Mode delay to use the pulses internally created to set the distance between each print.

Figure 4-28: Time Mode

6 Set the required delay for the selected mode in the range 1 to 10,000.

7 Set Distance Mode delay to use a user defined distance interval to set the gap between the start of each print.

Figure 4-29: Distance Mode

Note: If in external encoding, correct PPI or PPMM settings must be entered in the line configuration menu for the printer to calculate correct repeat distance.

DIN Print

DIN printing inverts and reverses alternate prints, so that the message can be read from any direction. When printing on cables, this method is used.
How to Print Messages

You must select a message before you start the printing process.

How to Select a Message

The Menu screen displays the message that is ready for printing in a box at the bottom of the screen. The name of the message is seen at the top of the box and a preview of the message in the box.

Do the following tasks to select a message:

1. Open the Messages menu and select the Select Print Message option. The Select Message to Print dialog box appears.

2. Press the Up arrow key or the Down arrow key to highlight the required message. The highlighted message is shown in the WYSIWYG part of the display.

   Note: You can enter the name of the message that you selected to print. The selector bar automatically highlights the required message.

3. Press the Enter key to select the message for printing. The selected message appears in the WYSIWYG of the display.
How to Start the Printing

The default sequence is Clean Start.

*Note:* You can select the option of Quick Start to activate the inkjet. The service technicians use this feature. Refer to the service manual for more information.

1. Press the F1 key to start the jet start sequence.

   During the sequence, the jet running icon \( \text{i} \) flashes on the display. The sequence takes approximately one minute. When the sequence is completed, the icon is turned on continuously.

2. To start the printing process, the following operations are required:
   - The print must be enabled (access `Print > Print Enable`). The `Print Control` menu appears. Select `Enable` (Quick Key: `ALT+F1`).
   - The product sensor must send a trigger signal.
   - It may be necessary to adjust message parameters.
   - The photocell level may need to be changed (access `Configure > Photocell Levels`).

   *Note:* When the print is enabled, the green LED on the keypad is turned on continuously.

Monitor the Printing

When the printer is in the operation, use the following to monitor the status:

- The status icons on the display
- The LEDs on the keypad
- The stack light (optional)
How to Stop the Printing

Disable the print to stop the printing (access Print > Print Enable). The Print Control menu appears. Select Disable (Quick Key: ALT+F1).

You can use the Clean Stop or Quick Stop sequences to stop the jet along with stopping the printing. The default sequence is Clean Stop. The Quick Stop sequence is used by service technicians. Refer to the service manual for more information.

Press the F1 key to start the jet stop sequence.

During this sequence, the jet stop icon 🗝️ flashes on the display. The sequence requires one minute to complete. When the sequence is complete, the icon is turned on continuously.

The printing automatically stops after the jet stop sequence is complete.

Note: Do not turn off the printer until the flushing cycle is complete.

How to Install and Print Custom Fonts

This procedure shows you how to install custom font and print messages using the custom font.

- Custom Font height must match with the height of the standard font available in the printer. Following are the list of the available font height.
  - 5-high
  - 7-high
  - 9-high
  - 12-high
  - 16-high
  - 24-high
  - 34-high

Note: Font heights 24-high and 34-high are not available in Videojet 1620 UHS 50 micron printer.

Note: Font height 34-high is not available in Videojet 1620 UHS 40 micron printer.
• Custom font file must be in *.abf2 format.
• The naming convention of the font must be in xxhigh_custom.abf2. xx represents the height of the font (Ex: A 16-high custom font file must be named as 16high_custom.abf2).
• Contact your local Videojet sale personnel for custom fonts SAR request.

Installation
Do the following tasks to install a custom font:

1. Copy the custom font you wish to install to the root of a USB Flash Drive.
2. Insert the USB Flash Drive in the USB socket on the side of the printer.
3. Press CTRL + F4 key to list files on the USB Drive.
4. Select the font file to install.
5. Press the Enter key. The following message appears in the display screen to confirm the update.

   Confirm
   Please confirm the update
   Enter to continue Esc to exit

6. Press the Enter key. The following message appears in the display screen.

   Note: User must wait for few seconds until the note appears to power cycle the printer.

   Note
   Power-cycle to apply the update
   Press any key to continue

7. Power cycle the printer to apply the updates.
Create and Print a Message

Do the following tasks to create and print a message using custom font:

1. Press the F3 key (while in the Editor Screen) for the Editor Attributes screen to appear.

2. Select the Font type as Custom and press the Enter key.

3. Press the F1 key to select the custom font.

   **Note:** Set the font height to match the custom font height.

4. Enter the message in the message editor.

5. Press Shift + F1 to save and exit.

   **Note:** Select message to print, if the message is not loaded.
Turn off the Printer

**Caution**

EQUIPMENT DAMAGE. Turn off the printer after the jet shutdown cycle is complete. The failure to follow this caution can cause additional maintenance.

**Caution**

EQUIPMENT DAMAGE. Do not start and stop the printer many times.

When you stop the printer, the printer uses the make-up fluid to flush the system. If you start and stop the printer many times, the printer uses large amount of make-up fluid. The increased use of make up fluid can cause a Ink Core Level High error and low ink viscosity. To prevent this problem, quick start and stop must be used.

Press the main power switch to turn off the printer.

*Note:* It is recommended to start the printer once in every three months. If the printer is shutdown for more than three months, it is recommended to follow the extended shutdown routine. Refer to “How to Prepare for Long-term Shutdown (Storage) or Transportation” on page 6-3 for the procedure.
User Interface

Introduction

This chapter describes how you can use the user interface (UI) to do the following tasks:

- Create messages
- Edit messages
- Save messages
- Create user fields

The UI contains the following screen:

![Image of Menu Screen]

*Figure 5-1: Menu Screen*

**Menu Screen**

When you login, the first screen that appears is Menu screen. The Menu screen has a row of menus along the top of the screen. The menus give quick and easy access to the different functions of the printer. You can see only five menus in the screen (see Figure 5-1), press the Left arrow key or Right arrow key to access the other menus.
To Select the Menus and Items

To select the menus, and the items in the menus, you can use either the arrow keys or the short cut keys.

**Arrow Keys**

| To select a menu: | 1. Press the *Left arrow* key or *Right arrow* key until the menu is highlighted.  
<table>
<thead>
<tr>
<th></th>
<th>2. Press the <em>Enter</em> key.</th>
</tr>
</thead>
</table>
| To select an item from a menu: | 1. Press the *Up arrow* key or the *Down arrow* key until the required item is highlighted.  
|                  | 2. Press the *Enter* key. |

**Note:** If there are many items on the menu to display on screen, the label *More* appears next to the top or bottom of the menu. For example, refer to Figure 5-2. This label indicates that more menu entries are available above, or below the items that are displayed now. Press the *Up arrow* key or *Down arrow* key to scroll through the items.

![Figure 5-2: The More Tag](image-url)
Shortcut Keys

To access the different menus in the main menu, hold the Alt key, and press the highlighted character. The menu and the shortcut key are shown in Table 5-1.

<table>
<thead>
<tr>
<th>Menu</th>
<th>Shortcut Key</th>
</tr>
</thead>
<tbody>
<tr>
<td>Messages</td>
<td>ALT+M</td>
</tr>
<tr>
<td>Editor</td>
<td>ALT+E</td>
</tr>
<tr>

</tr>
</tbody>
</table>

*Table 5-1: Shortcut Keys*
**Menu** | **Shortcut Key**
---|---
Edit User Field | ALT+F4
Quick Start (or Quick Stop if the jet is in operation) | CTRL+F1
Nozzle Flush | CTRL+F2
Continuous Print | CTRL+F3
Copy From USB | CTRL+F4

* - These shortcut keys appear only in Editor menu.

**Note:** The Alt key takes the priority over the Ctrl key if both the keys are held together.

### To Enter the Text, Numbers and Toggle Values

<table>
<thead>
<tr>
<th>Text</th>
<th>Use the keypad to enter the required text, or special characters.</th>
</tr>
</thead>
<tbody>
<tr>
<td>Numerical values</td>
<td>Use the keys 0 to 9, or press the Right arrow key to increase the value or press the Left arrow key to decrease the value.</td>
</tr>
<tr>
<td>Toggle values (for example, on/off)</td>
<td>Press the Left arrow key or Right arrow key.</td>
</tr>
</tbody>
</table>

**Esc Key**

To exit from a menu without any change in the settings, press the Esc key.

**Soft Keys**

The four function keys (F1 to F4) are known as the soft keys. The UI assigns the default functions to these keys in normal conditions. When you hold Alt or Ctrl key, the UI assigns different functions to the function keys.

The functions that are available for different key combinations are shown in Table 5-2.
If you hold the Alt key

<table>
<thead>
<tr>
<th>Key</th>
<th>Function</th>
</tr>
</thead>
<tbody>
<tr>
<td>F1</td>
<td>Start Printing (or Stop Print if the printer is in the print mode)</td>
</tr>
<tr>

<thead>
<tr>
<th>Messages Menu</th>
<th>Commands</th>
<th>Function</th>
</tr>
</thead>
<tbody>
<tr>
<td>Messages</td>
<td>Select Print Message</td>
<td>Opens the Select Message To Print dialog box. Select a message to print or edit.</td>
</tr>
<tr>
<td></td>
<td>Message Parameters</td>
<td>Opens the message parameters for the selected message. All parameters can be changed.</td>
</tr>
<tr>
<td></td>
<td>Default parameters</td>
<td>Opens the Default Parameters menu. All the default parameters for new messages can be changed.</td>
</tr>
<tr>
<td></td>
<td>Edit Message</td>
<td>Opens the Select Message to Edit dialog box. The selected message is opened in an edit screen. To save the edited message, go to the Editor menu</td>
</tr>
<tr>
<td></td>
<td>New Message</td>
<td>Opens the New Message dialog box. The system prompts to enter the new message name. The user can enter the new message in the edit screen. To save the new message, go to the Editor menu. The parameters for a new message are set to the default values.</td>
</tr>
<tr>
<td></td>
<td>Delete Message</td>
<td>Opens the Select Message to Delete dialog box. The selected message is deleted. <strong>Note:</strong> You cannot delete the Test Message and the message selected for printing (shown in the WYSIWYG).</td>
</tr>
<tr>
<td></td>
<td>Copy Message</td>
<td>Opens the Copy Message dialog box. Enter message names in the From and To fields. If a message exists, and you try to copy the content into that message, the following message appears on the display: “Already exists. Overwrite it?” (answer with Y or N).</td>
</tr>
</tbody>
</table>

Table 5-3: Messages Menu and Commands
<table>
<thead>
<tr>
<th>Messages Menu</th>
<th>Commands</th>
<th>Function</th>
</tr>
</thead>
<tbody>
<tr>
<td>Message Select Source</td>
<td></td>
<td>Opens the Message Select Source dialog box, with options Internal, External or Barcode scan. For External option, you can select the format Binary or BCD and use the inverted function to invert (high to low) the data. For Barcode Scan option, you can select the source Barcode scan queue or Last received barcode scan. Use the options to configure how the inputs are read.</td>
</tr>
<tr>
<td>Edit External Select Table</td>
<td></td>
<td>Opens the External Message Select menu. Enter the names of the messages to be available to the external source. The external message names can be added, edited and deleted. Press the F2 key to select message names from a list of those available.</td>
</tr>
<tr>
<td>Edit Barcode Scan Select Table</td>
<td></td>
<td>Opens the Barcode Scan Message Select Table dialog box. The Barcode Scan Select table works in conjunction with the External Message Select table (refer “To Select the Source for a Message” on page 5-26). The user configures the External Message Select table to map message names to an index number in the range 00 to 99. The user configures the Barcode Scan Select table to map each index number to a sequence of characters (numbers or letters) which may be received from a connected barcode scanner.</td>
</tr>
<tr>
<td>Delete All Messages</td>
<td></td>
<td>Deletes all internal messages.</td>
</tr>
<tr>
<td>Export message to USB</td>
<td></td>
<td>You can transfer a single message and all the resources it uses (if you want to take the messages to another printer to print) from the printer to an USB stick.</td>
</tr>
</tbody>
</table>

Table 5-3: Messages Menu and Commands (Continued)
The commands in the Editor menu are shown only if the Message Editor is open. If the Message Editor is closed, the only option shown in the Editor menu is "Only used when in Editor".

**Note:** All Editor commands are available from level 1 and above.

<table>
<thead>
<tr>
<th>Editor Menu</th>
<th>Commands</th>
<th>Function</th>
</tr>
</thead>
<tbody>
<tr>
<td>Select Font</td>
<td>Open the Select Font menu. The selected font is applied to the selected text in the message. <strong>Note:</strong> Press F1 to change font height.</td>
<td></td>
</tr>
</tbody>
</table>

</thead>
<tbody>
<tr>
<td>Insert User Field</td>
<td>Opens the Select user field menu. The contents of the user field are copied into the message at print time. Example: expiry date, shift code. <strong>Note</strong>: Press F2 to select user field.</td>
<td></td>
</tr>
<tr>
<td>Modify Attributes</td>
<td>Opens the Editor Attributes menu. One or more attributes can be set. The set attributes are applied to the selected text in the message. (Attributes are properties that can be applied to individual characters). <strong>Note</strong>: Press F3 to modify attributes.</td>
<td></td>
</tr>
<tr>
<td>Copy Text</td>
<td>Copies the selected text to the clipboard.</td>
<td></td>
</tr>
<tr>
<td>Paste Text</td>
<td>Pastes the text from the clipboard at the cursor position.</td>
<td></td>
</tr>
<tr>
<td>Set Keyboard Type</td>
<td>Opens the Select keyboard Type menu. Select the keyboard type to be used for the edit session. Characters from more than one language alphabet can be included in a message.</td>
<td></td>
</tr>
<tr>
<td>Save Message</td>
<td>Saves the message being edited and keeps the editor screen open.</td>
<td></td>
</tr>
<tr>
<td>Save and Exit</td>
<td>Saves the message being edited and exits the editor screen.</td>
<td></td>
</tr>
<tr>
<td>Clear Message</td>
<td>Deletes the content in the message and keeps the editor screen open.</td>
<td></td>
</tr>
<tr>
<td>Abandon</td>
<td>Exits the editor screen without saving any changes to the message.</td>
<td></td>
</tr>
</tbody>
</table>

*Table 5-4: Editor Menu and Commands (Continued)*

**Note**: Press F4, to select Message Parameters.
User Fields

Note: All User Field commands are available from level 1 and above.

<table>
<thead>
<tr>
<th>User Fields Menu</th>
<th>Commands</th>
<th>Function</th>
</tr>
</thead>
</table>
|                  | **Edit user field** | Opens the Select user field to edit menu. Options are all the existing user fields.  
  - When you select a text field, an individual dialog box for the new user field with the Text and Attribute options opens.  
  - When you select a counter field, a menu with options for the counter parameters opens.  
  - When you select a logo field, the Edit logo screen opens. |
|                  | **New user field** | Adds a new user field to the selected message. Opens the New User Field dialog box with Name and Description fields.  
  - When you select a Text description, the New Field dialog box with Text and Attribute fields opens.  
  - When you select a Counter description, the New counter dialog box with fields for the counter parameters opens.  
  - When you select a Logo description, the Edit logo screen opens.  
  - When you select a Remote description, the New Field dialog box with Field ID and Default Value fields opens. |
|                  | **Delete user field** | Opens Delete User Field menu. |
|                  | **Reset Counter** | Opens the Select Counter to Reset menu. |
|                  | **Set Shifts** | Opens the shift menu where the duration of each shift can be defined. |
|                  | **Setup Timer** | Opens the Timer Setup dialog box where you can define the format for the timer. For example, you can set the following values for the timer:  
  - 2 or 4 digit timer  
  - Time interval  
  - Characters printed - alphabetical, numeric or alpha-numeric |
|                  | **Setup Encoded Hour** | Opens the Alpha Hour dialog box where you can define how each hour is displayed (numeric or alphabetical). |
|                  | **Setup Encoded Day of the Week** | Opens the Day of the Week where you can define the offset unit, value and set the values (numeric or alphabetical) for every day of the week. |

Table 5-5: User fields Menu and Commands
**Print**

*Note: All Print Menu commands are available from level 2 and above.*

<table>
<thead>
<tr>

|               | Set Editor Font group | Used to set the editor font group that you require:  
- Chinese Simplified  
- Chinese Traditional  
- Japanese  
- International  
**Note:** The display language and keyboard language are independent.  
For example, an operator in China has to print Japanese characters, the display language must be changed to Chinese S or Chinese T. To do this, you must set the keyboard type under the Editor Menu ("To Insert Foreign Language Characters" on page 5-64). |
|               |                  | **Select Editor Font Group**  
|               |                  | Editor Font Group: International  
|               |                  | Date/Time language: English  
|               |                  | WSI Char Order: Standard  
|               |                  | **Select kbd Type**  
|               |                  | English  
|               |                  | Traditional Chinese IME  
|               |                  | Chinese IME  
|               |                  | You must set the Editor Font group to Japanese. A power cycle (turn off the printer and turn on the printer) is required. |
|               | Photocell Source | Selects the photocell source to be used. Opens the Print Control menu. Photocell source can be toggled between External 1 and External 2. (NB External 2 requires special software). |
|               | Photocell Levels | To allow the use of both High and Low activating photocells this command enables the photocell trigger level to be set to high or low. |

**Auto Print on Jet**
You can enable the machine start printing when the ink jet has started.

*Note: A message must be available.*

**Auto Print on Select**
Enables the machine to be set up so that it will initiate printing as soon as a message has been selected subject to the ink jet having started.

**Serial Port Configuration**
You can configure the serial port. For more information refer “How to Configure the Serial Port” on page 4-13.

<table>

Backup System Settings | Parameters set during the calibration process are saved to memory, overwriting any previously saved parameters.

Restore System Settings | Previously saved parameters and settings are read from memory, undoing any recent changes.

Full System Backup | Backs up all programmable printer data, including job and configuration information, to a USB stick.

*Note*: You can perform a full system backup after you have set up the system.

Full System Restore | Restores programmable (you can select from the Restore Options menu) printer information, including job and configuration information, from a USB stick, although the printer prompts the user to select which files to recover.

*Note*: For example, when a CSB has failed, you can run a full system restore to recover the lost settings.

System Update | Updates messages, fonts, rasters on printer. System update allows files to be added to the printer without replacing existing files (.cadd file)

*Note*: You can perform a software upgrade to upgrade only the required settings and selected elements. The options are:
- All
- Fonts
- Application - software version
- Messages - move all the messages
- Settings - HV calibration, viscosity
- Rasters

Set Hejra Date | Sets the date per the Arabic calendar.

*Table 5-10: Calibrate Menu and Commands (Continued)*
Manage Messages

To Create a Message

Do the following tasks to create a message:

1. Press Alt+M to open the Messages menu.

   Note: You can use quick keys Alt+F2 to open the messages menu in the menu screen.

2. Select New Message. The New Message dialog box appears (see Figure 5-4).

3. Enter a name for the message.

   Note: The message name can contain a maximum of 31 alphanumeric characters which includes the spaces.

Figure 5-3: Messages Menu

Figure 5-4: New Message Dialog Box
Press the Enter key. The Message Editor screen appears (see Figure 5-5 on page 5-25).

Select Alt+E to enter the message editor which will allow you to set the height of the font, insert user fields and setup the message attributes.

Enter the message contents using the keypad.

To Edit a Message

Do the following tasks to edit the messages:

1. Press the Alt+M keys. The Messages menu appears.
2. From the Messages menu, select Edit Message. The Select Message To Edit menu appears.
3 Select the message that you require to edit. The Message Editor screen appears.

The function keys are assigned as follows in the Message Editor screen:

- **f1**: Select font height

*Note*: Videojet 1620 printer has 5, 7, 9, 12, 16, 24 and 34-high fonts.

*Note*: Videojet 1620 UHS printer has 5, 7, 9, 12 and 16-high fonts.

*Note*: The font heights available are independent of language.

- **f2**: Insert a user field

- **f3**: Change the attributes

- **f4**: Set the message parameters

+ **shift + f1**: Save the changes and exit the Message Editor

*Note*: Other functions are available under Editor Menu (Alt+E).

### To Select the Source for a Message

You can set and select the stored messages in the machine by an internal source or an external parallel message selection source.

1. Press the **Alt+M** keys. The **Messages** menu appears.

2. Select **Message Select Source**. The **Message Select Source** dialog box appears.

![Message Select Source Dialog Box](image)

*Figure 5-7: Message Select Source Dialog Box*

3. Use the arrow keys to select the required source - **Internal**, **External** or **Barcode Scan**.

4. Select the format for the message - **Binary** or **BCD** for **External** source.

5. Use the arrow keys to **Invert** the message data for **External** source.
6 Select the source - Barcode scan queue or Last received barcode scan for Barcode Scan.

7 Press the Enter key to set the source and return to the Message Editor screen.

8 Select the Messages menu again.

9 Select Edit External Select Table. The External Message Select dialog box appears.

10 Enter the names into the table locations for the parallel bit values from the external data selection source.

11 Press the F2 key to select the message names from a list of those available.

12 When you assign all the messages that must be available to the external source, press the Enter key to return to the Message Editor screen. Else, press the Esc key to return to the Message Editor screen without any changes.

To Copy and Paste a Message

If only minor changes are required to an existing message to create a new message, use the Copy Message option.

1 Press the Alt+M keys. The Messages menu appears.

2 Select Copy Message. The Copy Message dialog box appears.

3 Enter the name of the source message in the From box.

4 Enter the name of the new message in the To box.

5 Press the Enter key to copy the message and return to the Menu screen.
To Enter Multiple Lines in a Message

*Note:* The printer automatically selects the best configuration from the message that you entered.

You can enter the messages that have a maximum height of 34 dots (1620 printer) and 16 dots (1620 UHS printer). You can enter multiple lines of text until all lines fit within the allowed height of the message.

Use the Up and Down arrow keys to move the cursor to the line where you enter the text.

To Set the Message and Default Parameters

The message parameters define the visual features and position (product delay) of the message.

The different parameters that are available (Messages > Default Parameters) are shown in Table 5-11, and Figure 5-10 on page 5-30.

<table>
<thead>
<tr>
<th>Parameter</th>
<th>Range</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Width</td>
<td>Refer to Message width and Positioning Addendum</td>
<td>Controls the final message width. The maximum speed of the print puts a limit to the minimum width. Set the width to 1 and print at the maximum rate that you can get for the selected number of “printed drops”.</td>
</tr>
<tr>
<td>Character Height</td>
<td>1 to 10</td>
<td>Sets the character height at 1 (minimum print height) to 10 (maximum print height).</td>
</tr>
<tr>
<td>Character Gap</td>
<td>0 to 9</td>
<td>Sets the character gap between 0 (equivalent to a single vertical line of dots) to 9 rasters/ strokes (equivalent to 10 vertical lines of dots). Because of character formation, setting 0 gives a character gap of 1 raster.</td>
</tr>
<tr>
<td>Product Delay</td>
<td>Refer to Message width and Positioning Addendum</td>
<td>Sets the product delay (the time between the start of product (trigger point) and the print start position).</td>
</tr>
<tr>

<tr>
<td>Raster Repeat</td>
<td>1 to 10</td>
<td>Sets the count for the same raster/ stroke is to be printed. This allows characters to be emboldened.</td>
</tr>
<tr>
<td>Raster Substitution</td>
<td>-</td>
<td>When selected ON the printer automatically selects the appropriate raster for the line running speed.</td>
</tr>
</tbody>
</table>

*Table 5-11: Default Message Parameters*
To Set Default Parameters

The default values for the parameters are set during the installation, but you can change the values any time.

Do the following tasks to set the default parameters:

1. Press the $Alt+M$ keys. The Messages menu appears.
2. Select the Default Parameters (Figure 5-10) to edit the values.

   **Note:** The default parameters are applied only to the new messages. The existing messages do not change.

3. Select the parameter that you require to edit, and enter the required value.

*Figure 5-10: Default Parameters Dialog Box*

**To Set Message Parameters**

When you create and edit a message, you can change the values for the parameters.

Do the following task to set the Message Parameters:

1 Press the *Alt+M* keys or the *F4* key (only in *Editor* menu) to open the *Messages* menu.

2 Under the *Messages* menu, select the Message Parameters (Figure 5-11 on page 5-30) to edit the values.

*Note: The changes made to the values under the message parameters is applicable only to current messages and not applied to the new messages.*

3 Select each parameter that you require to edit, and enter the required value. After all the parameter values are set, press the *Enter* key to return to the Message Editor screen.

*Note: The values that you set depend on the mode (linear or divider/stroke) selected.*

*Figure 5-11: Message Parameters Dialog Box*
To Clear a Message

Caution

RISK OF DATA LOSS. The Clear Message option, when selected, does not ask for confirmation to clear the message and also, you cannot recover the messages that are cleared.

Do the following tasks to clear all the contents of the message that is edited:

1. Follow from Step 1 to Step 3 under the section “To Edit a Message” on page 5-25 to open the Message Editor screen.

2. Press the keys Alt+E to open the Editor menu.

3. Select Clear Message from the Editor menu. The message is removed.
To Save a Message

Do the following tasks to save a message:

1. Follow from Step 1 to Step 3 under the section “To Edit a Message” on page 5-25 to open the Message Editor screen.

2. Press the keys Alt+E to open the Editor menu.

3. Select the option Save Message to save the message and also continue to edit the message.

To Save a Message and Exit

Use either of the two methods to save the message and exit from the Message Editor screen:

- Select Save and Exit from the Editor menu (see Figure 5-14).

- Press the keys Shift + F1.

Figure 5-13: Save Message

Figure 5-14: Save and Exit Option
To Exit without Saving the Message

Do the following tasks to exit without saving a message:

1. Follow from Step 1 to Step 4 under the section “To Create a Message” on page 5-24 to open the Message Editor screen.

   **Note:** When you use this option for a new message, the content of the whole message is lost. If you edit a current message, only the changes are lost.

2. Select the *Abandon* option from the *Editor* menu.

![Figure 5-15: Abandon Option](image)

To Delete a Message

You create more memory space if you can delete some messages.

Do the following tasks to delete the messages:

1. Press the *Alt+M* keys. The *Messages* menu appears.

2. To delete a single message, select the *Delete Message*. The *Select Message to Delete* dialog box appears.

![Figure 5-16: Select Message to Delete Dialog Box](image)

**Caution**

RISK OF DATA LOSS. Make sure to select the correct name. The system does not give any confirmation prompt for the message selection.
a. Use the arrow keys to select the message that you require to delete.
b. Press the Enter key to delete the message and return to the Menu screen.

3 To delete all messages, select the option Delete All Messages and press the Enter key.

*Note: All messages except the TEST MESSAGE are deleted.*

**Manage User Fields**

The User Fields contain the information entered by the user. This information can be of any format as follows:

- Text
- Counters
- Logos
- Remote

*Note: The clock code can be considered as text data.*

When a user field is inserted into a message, the content of the user field is copied into the message during the print time. When the user field changes, the message is updated automatically and printed.

The pre-defined user fields in the software are described in Table 5-12.

<table>

Table 5-12: List of Pre-defined User Fields (Continued)
To Insert a User Field

A user field can contain the following information:

- Current and expiration time
- Dates
- Shift codes
- Text
- Serially loaded data
- A logo (graphic) or a counter

1. From the Message Editor screen, press the F2 key, or select Insert User Field from the Editor menu. The Select user field menu appears.

![Select User Field Menu](image)

Table 5-12: List of Pre-defined User Fields (Continued)
2 Select the user field that you require and press the Enter key. For example, the Alpha Month is shown in the Figure 5-18.

![Figure 5-18: User Field - Alpha Month](image)

**To Insert a Pre-defined User Field**

Do the following tasks to insert a pre-defined user field:

1. Follow from Step 1 to Step 4 under the section “To Create a Message” on page 5-24 to open the Message Editor screen.

   **Note:** Make sure that the height of the font and position of the cursor are correct.

2. Press the F2 key in the Message Editor window to open a list that shows all the current user fields that are defined (see Table 5-12 on page 5-34).

![Select user field](image)

**Note:** The user fields list contains a number of pre-defined user fields with the fields created by the operators and other technicians.

3. Highlight the name of the user field you require to insert with the Up and Down arrow keys.

4. Press the Enter key to insert the user field into the message and exit the dialog box.
To Edit a User Field

You can change the content and format of any user field in the list.

To edit a user field, do the following tasks:

1. Press the keys $\text{Alt}+U$ to open the User Fields menu.
2. Select Edit User Field. The Select user field to edit dialog box appears.

3. Select the field that you require to edit from the list.
   For example, select Alpha Month.
4. Press the Enter key.
5. Edit the code for Alpha Month (see Figure 5-21). Refer to “To Set Clock Information” on page 5-41 and Table 5-13 on page 5-41 for more information.

Note: When the ‘Use Local Language’ option is checked, printer uses the language set in configuration menu, when unchecked, printer uses English.
To Delete a User Field

To delete a user field, do the following tasks:

1. Press the keys Alt+U to open the User Fields menu.
2. Select Delete User Field. The Delete User Field list appears.
3. Select the field that you require to delete from the list.

Caution

RISK OF DATA LOSS. The Delete user field option does not ask for confirmation to delete a User Field.

To Create a Custom User Field

Do the following tasks to create a user field:

1. Press the Alt+U keys. The User Fields menu appears.

   ![](image)
   Figure 5-22: User Fields Menu

2. Select New User Field and press the Enter key. The New User Field dialog box appears.

   ![](image)
   Figure 5-23: New User Field Dialog Box

3. Enter a name for the User Field.

   Note: Do not press the Enter key after you enter the name in the user field. Use the Down arrow key to select one of the types of description.
4 Use the Left arrow key and Right arrow key to select one of the following types of descriptions:
   • Text
   • Counter (refer to “To Set a Counter” on page 5-46)
   • Logo (refer to “To Add Logo” on page 5-48)
   • Remote (refer to “To Add Remote” on page 5-49)
   
   For example, you can select the Text as the description, and press the Enter key.

5 Enter the content in the text field.

6 Use the Left arrow key and Right arrow key to select the Attribute. Select Normal Text as the attribute. You can select one of the following attributes also:
   • Normal Text (refer to “To Set Text Attributes” on page 5-41)
   • Clock Information
   • Prompted Field
   • List Prompt
   • Pull Week
   • Pull Month

   ![Figure 5-24: Text Attribute](image)

7 Enter the data that you require to print.

8 Press the Enter key to save and exit.
To Set Text Attributes

If you select *Text* as the description, you can set the following types of attributes:

**Normal Text**

Normal text is a fixed text string that is used when you insert the serial data.

**Clock Information**

To Set Clock Information

The following table lists the clock codes required to define the clock information.

<table>
<thead>
<tr>
<th>Code</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td>A</td>
<td>Day number (1 to 7)</td>
</tr>
<tr>
<td>BC</td>
<td>Year</td>

<tr>
<td>QRS</td>
<td>Day of Year</td>
</tr>
<tr>
<td>TU</td>
<td>North American Week Number</td>
</tr>
<tr>
<td>VW</td>
<td>European Week Number</td>
</tr>
</tbody>
</table>

*Table 5-13: Codes and Definitions*

Do the following tasks to add a clock information attribute to the user field:

1. Follow steps 1 to step 3 under the section “To Create a Custom User Field” on page 5-39.
2. Select the *Description* as *Text* with the help of *Left* and *Right arrow* keys.
3. Press the *Enter* key to open the configuration dialog box for text user fields (see Figure 5-25).
4. Enter the correct code in the *Text* field. Refer to Table 5-13 on page 5-41 for more information.
When you enter the code, remember the following:

a. These codes are case-sensitive.

b. The standard date codes are from the Gregorian calendar used by western nations. The Arab Hejra calendar uses different date codes.

c. You can add other characters like numbers, spaces, punctuation marks to format the codes. For example, DE/FG/BC.

**Note:** Clock codes with lower case represents expiry dates of the same code definition.

5 Select the **Attribute** as **Clock Information**.

6 Press the **Enter** key after you enter the codes to save the settings and exit the **Time Insert** dialog box.

The new clock insert is added in the list of defined user fields. Press the *F2* key in the Message Editor screen. You can insert this new field in the current message.

**Prompted Fields**

Prompted fields define the content that can change each time the message is used. The content can include a message of the day or other content that is related to a known run of the product, but remains the same for that complete run.

**To Define a Prompted Field**

When a message that contains a prompted field is loaded, the operator is asked to provide the contents for the field.

Do the following tasks to add a prompted field in User fields:

1 Follow steps 1 to 3 under the section “To Create a Custom User Field” on page 5-39.

2 Highlight the **Description** option through **Down arrow** key.

3 Select the **Text** option through **Left** and **Right arrow** keys.

4 Press the **Enter** key to open the configuration dialog box for text user fields (Figure 5-26).

![Figure 5-26: Attribute - Prompted Field](image)

5 Enter a default value for the prompted field which is related to the field with the label **Text**. This text is displayed in the prompted field until the operator deletes the text and enters new information.

6 Highlight **Attribute** option using the **Down arrow** key.
7 Select the Prompted Field option with the help of Left and Right arrow keys.

8 Press the Enter key to open the Prompted Field Length window (see Figure 5-27).

![Figure 5-27: Prompted Field Length Dialog Box](image)

9 Enter the maximum length of the prompted field in the space provided (any number less than or equal to 50 is allowed here).

**Note:** If a number greater than 50 is added, then the printer automatically decreases the number to 50.

10 Press the Enter key to save the created prompted field and exit the Prompted Field Length dialog box. Refer to “To Modify Text Attributes” on page 5-60 for more information.

**List Prompt**

User can select their contents from a list when the message is selected to print. When the field is created, the user can define the prompt message and the list of values that will be available on the input.

**To Define a List Prompt**

When a message that contains a list prompt is loaded, the operator is asked to provide the contents for the field.

Do the following tasks to add list prompt attribute to the User fields:

1 Follow steps 1 to 3 under the section “To Create a Custom User Field” on page 5-39.

2 Highlight the Description option through Down arrow key.

3 Select the Text option through Left and Right arrow keys.

4 Press the Enter key to open the configuration dialog box for text user fields (see Figure 5-28).

![Figure 5-28: Attribute - List Prompt](image)

5 Enter a default value for the list prompt, which is related to the field with the label Text. This text is displayed in the list prompt until the operator deletes the text and enters new information.
6 Highlight *Attribute* option using the *Down* arrow key.

7 Select the *List Prompt* option using the *Left* and *Right arrow* keys.

8 Press the *Enter* key to open the configuration dialog box for list prompt (see Figure 5-29).

9 Enter the value for *Number of options* field.

10 Highlight *Default option type* option using the *Down* arrow key.

11 Use the *Left arrow* key and *Right arrow* key to select one of the following types of default options:
   - Specified line
   - Blank line
   - Last line used

12 Press the *Enter* key to open the *Option list* dialog box.

13 Enter the list of options and press *Enter* to save the created list prompt and exit the option list dialog box. Refer to “To Modify Text Attributes” on page 5-60 for more information.

**Pull Week**

The date remains the same for the whole week and changes when the printer reaches the roll over day. You can format the pull week date inserts using any of the following parameters:

- Day
- Month
- Year (one, two or four digit format)
- Alpha Month
- Alpha day
- Julian date
To Define a Pull Week

Do the following tasks to add pull week to the user field:

1. Follow steps 1 to 3 under the section “To Create a Custom User Field” on page 5-39.
2. Highlight the Description option through Down arrow key.
3. Select the Text option through Left and Right arrow keys.
4. Press the Enter key to open the configuration dialog box for text user fields (Figure 5-31).

```
Pull Week
Text FG/DE/BC
Attribute Pull Week
```

Figure 5-31: Pull Week

5. After you enter the text, go to the Attribute sub-menu and use the right or left key to select Pull Week. Press Enter.

6. You can set the following parameters:
   - Roll Day - Day of the week for roll over
   - Offset Unit - Default is Week
   - Offset Value - Sets the number of weeks after the roll day is set
   - Mode - Roll Forward, Back, or Nearest
   - Use Locale Language - Yes or No

```
Pull Week
 Roll Day WEDNESDAY
 Offset Unit Week
 Offset Value 0
 Mode Forward
 Use Locale Language Yes
```

Figure 5-32: Pull Week - Parameters

For example, if the current date is 20/06/09 and the mode is Forward, then the inserted date is 08/07/09. The printer, on the roll day (24/06/09, Wednesday), adds two weeks to calculate the date that is inserted.

Back, then the inserted date is 01/07/09. The printer calculates from the previous roll day (17/06/09, Wednesday) and adds two weeks.

Nearest, then the inserted date is 01/07/09. The printer calculates from the nearest roll day (17/06/09, Wednesday) and adds two weeks.
To Set a Counter

The counters (serializers) are fields that change their value by a fixed amount. When a specified event occurs, the value changes by that fixed amount. For example, counters help to print different serial number on each product that passes the production line.

Do the following tasks to add counter as User field:

1. Follow steps 1 to 3 under the section “To Create a Custom User Field” on page 5-39.
2. Highlight the Description option with the help of the Down arrow key.
3. Select the Counter option with the help of Left and Right arrow keys.
4. Press the Enter key to open the counter dialog box for counters (see Figure 5-33).
5. Set the values for all the fields in the Counter Configuration dialog box (see Figure 5-33).

*Note:* The Start Value, Current Value, and End Value fields must contain the same number of characters. If a new counter counts from 1 to 500, make sure to enter 001 instead of 1 in the Start Value and Current Value fields.

*The counters are in numerical, alphabetical or alphanumeric format. The system automatically selects the type of counter from the start, current and end values configured. Alphanumeric counters count 0 to 9 and A to Z.*

6. Press the Enter key to save the settings, and exit the Counter Configuration dialog box.
### Counter Field Definitions

<table>
<thead>
<tr>
<th>Field Name</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td>Start Value</td>
<td>The value from where the count starts. When the value is reset, the counter returns to this value.</td>
</tr>
<tr>
<td>Current Value</td>
<td>The counters current value. This field changes the current value of a counter that is used now. When you set a new counter, the value entered here must be identical to the Start Value.</td>
</tr>
<tr>
<td>End Value</td>
<td>The value that the counter reaches at the end of the count. The counter resets to the start value, the next time it increases.</td>
</tr>
<tr>
<td>Step Size</td>
<td>The number of units with which the counter increases or decreases. The size is a numerical value even for alphabetical counters (a value of 2 causes an alphabetical counter to count “a, c, e, g”).</td>
</tr>
<tr>
<td>Step Direction</td>
<td>Set to Increment or Decrement</td>
</tr>
<tr>
<td>Repeat Count</td>
<td>The number of times that a count value is printed before the value increments or decrements.</td>
</tr>
<tr>
<td>Leading Character</td>
<td>Define another character to replace any leading zeros. The default setting is “0” and the leading zeros remain the same.</td>
</tr>
<tr>
<td>Inc/Dec on</td>
<td>This field shows the causes for the counter to increment or decrement itself. Select Print to show that the counter has increased or decreased if a message that contains the counter is printed. Select the name of another counter to show that the counter is increased or decreased, when the selected counter reaches its End Value</td>
</tr>
<tr>
<td>External Reset</td>
<td>Use this feature to send an external signal (through external PCB4 - I/O 25 way) to reset the counter.</td>
</tr>
<tr>
<td>Wrap around</td>
<td>Set the value to Yes to start from the starting value after the maximum count is reached. Set the value to No to stop the printing after the maximum count is reached and turns on the alert light.</td>
</tr>
</tbody>
</table>

7 Press the *Enter* key to save and close the new counter field.
To Add Logo

Refer to “To Modify Text Attributes” on page 5-60 and “Manage Logos” on page 5-65 for more information.

1. Follow steps 1 to 3 under the section “To Create a Custom User Field” on page 5-39.

2. If you select the Logo as the description, the Logo Editor screen appears.

3. Press Spacebar on the keypad to turn on or turn off the cursor.

4. Create the logo by drawing lines with the help of the key combinations shown in Table 5-14 on page 5-48.

5. When your logo is complete, press Shift + F1 key to save and close your logo.

```
<table>
<thead>
<tr>
<th>Key Combination</th>
<th>Cursor Movement</th>
</tr>
</thead>
<tbody>
<tr>
<td>← or → or ↑ or ↓</td>
<td>Moves the cursor one dot at a time and not draw a line.</td>
</tr>
<tr>
<td>alt + ← or → or ↑ or ↓</td>
<td>Moves the cursor ten dots at a time and not draw any line.</td>
</tr>
<tr>
<td>shift + ← or → or ↑ or ↓</td>
<td>Moves the cursor one dot at a time and draws a line.</td>
</tr>
<tr>
<td>ctrl + ← or → or ↑ or ↓</td>
<td>Moves the cursor one dot at a time and deletes any dots drawn.</td>
</tr>
</tbody>
</table>
```

Figure 5-34: Edit Logo Screen

To Add Remote
Sets the number of characters into the message ASCII string through either

- RS232
- Ethernet
- RS485

To Set up Expiry Date

*Note:* You can set three expiry dates in a single message in this UI.

To set up the expiry date, do the following tasks:

1. Press the *Alt*+*U* keys. The *User Fields* menu appears.

   ![User Fields Menu](image)

   *Figure 5-35: User Fields Menu*

2. Select *New User Field* and press the *Enter* key. The *New User Field* dialog box appears.

3. Enter a name for the *User Field*. For example *EXPIRY 1*.

   *Note:* Do not press the *Enter* key after you enter the name in the user field. Use the Down arrow key to select one of the types of description.

4. Use the *Left arrow* key and *Right arrow* key to select *Text* description and press *Enter*.

   ![New User Field Dialog Box](image)

   *Figure 5-36: New User Field Dialog Box*

5. Enter the clock codes in the text field in the *EXPIRY 1* dialog box. For example, enter ‘FG/DE/BC’ for DD/MM/YY format or ‘BCDEFG’ for YYMMDD format.
6 Use the Left arrow key and Right arrow key to select the Attribute. Select Clock Information as the attribute and press the Enter key.

6

![Figure 5-37: Clock Information](image)

7 Select the Offset Unit (Day/Week/Month/Year) in the Time Offset dialog box.

8 Enter the Offset Value to ‘2’.

8

![Figure 5-38: Time Offset](image)

9 Press the Enter key to save and exit.

9

10 Press F2 and select the EXPIRY 1 user field and press Enter. You can see that the expiry date is in the format set above and the year has offset by 2 years.

10

![Figure 5-39: Expiry Date](image)
To Reset a Message Counter

Do the following tasks to reset a message counter to its start value:

1. Press Alt+U to open the User Fields menu.
2. Select the Reset Counter option (see Figure 5-40).

![User Fields Menu]

Figure 5-40: Select Reset Counter

The Select Counter to Reset menu appears.

![Select Counter to Reset Menu]

Figure 5-41: Select Counter to Reset

3. Select the counter that you want to reset and press the Enter key.

To Set Shifts

Use the Set Shift option to set the hour and minute for shift. The operator can set the hour and minute for five shifts. You can set the character also for the shifts.

Do the following tasks to set up the shifts:

1. Select User Fields from the menu bar, and press the Enter key.
2. Select Set Shifts from the User Fields menu.
3. Press the Enter key to open the Set Shifts dialog box (Figure 5-42 on page 5-52).
4. Set the start time for each shift that you require to use (start with shift 1) with the help of Up and Down arrow keys. For example, to set a start time of shift 1 as 7:15 A.M, set Start hour of shift one to seven and Start minute of shift one to 15.
5 Select the start time fields of the consecutive shifts using the arrow keys, and enter the necessary values (see step 4).

**Note:** Hour values depend on the 24-hour clock. For example, the entry “15” is for 3:00 PM which is the start time of the shift.

**Note:** The start time of the shift 2 must be after the start time of shift 1. When shift 3 is set, the start time must be after the start times of shifts 1 and 2.

**Note:** Shifts must be consecutive (you cannot set the timings for shift 1 and shift 3, and exclude Shift 2).

6 Enter “0” for both the start hour and the start minute of the first shift that you do not require. The shifts that follow are not used.

7 Enter the character that stands for the first shift in the Character for shift 1 field. This character that is for the current shift that is inserted in the messages during print. The printer counts upward from that character forward to get the remaining shift codes. An example of shift codes is shown in Table 5-15.

<table>

**Table 5-15: Shift Codes**

8 Press the Enter key to save the settings and exit the Set Shifts Menu.
To Set the Timer

Do the following tasks to set up the timer:

1. Follow from Step 1 to Step 4 under the section “To Create a Message” on page 5-24 to open the Message Editor screen.
   
   **Note:** Make sure that the height of the font and position of the cursor are correct.

2. Press the keys Alt+U to open the User Fields menu.

3. Select Setup Timer and press Enter to open the Timer Setup dialog box.

4. Set the following values for Timer Setup (see Figure 5-43).
   - Number of Digit - 2 or 4
   - Update Interval - 15, 30 or 60 minutes for a two character timer; 1, 15, 30 or 60 minutes for a four character timer
   - Timer Value - Select each digit to appear as digit or an alphabetic character by setting the value for Timer Char 1, 2, 3 and 4.

5. Press Enter to save and exit.

6. Press F2 to open the Select user field window and select the Timer option.
   You can see the format that you set above, in the preview window shown in Figure 5-44.

![Figure 5-43: Timer Setup](image)

![Figure 5-44: Timer User Field](image)
To Set the Encoded Hour

Do the following tasks to set up the encoded hour:

1. Follow from Step 1 to Step 4 under the section “To Create a Message” on page 5-24 to open the Message Editor screen.

   Note: Make sure that the height of the font and position of the cursor are correct.

2. Press the keys Alt+U to open the User Fields menu.

3. Select Setup Encoded Hour and press Enter to open the Alpha Hour dialog box (see Figure 5-45).

```
12:00 am  A
01:00 am  B
02:00 am  C
03:00 am  D
04:00 am  E
05:00 am  F
06:00 am  G
07:00 am  H
08:00 am  I
09:00 am  J
```

   Figure 5-45: Setup Encoded Hour

4. Set the alphabets or numeric values to different hours in a day.

5. Press Enter to save and exit.
To Set the Encoded Day of the Week

1. Follow from Step 1 to Step 4 under the section “To Create a Message” on page 5-24 to open the Message Editor screen.

   *Note:* Make sure that the height of the font and position of the cursor are correct.

2. Press the keys Alt+U to open the User Fields menu.

3. Select Setup Encoded Day of Week and press Enter to open the Day of Week dialog box (see Figure 5-46 on page 5-55).

   ![Day of Week Table](image)

   *Figure 5-46: Encoded Day of Week*

4. Set the values according to the values given in the table.

<table>
<thead>
<tr>
<th>Parameter</th>
<th>Value</th>
</tr>
</thead>
<tbody>
<tr>
<td>Offset Unit</td>
<td>Day/Week/Month/Year</td>
</tr>
<tr>
<td>Offset Value</td>
<td>The default is zero. The value that is set depends on the unit selected</td>
</tr>
<tr>
<td>Days of the week from</td>
<td>You can set numeric or alphabetical values for every day of the week.</td>
</tr>
<tr>
<td>Monday till Sunday</td>
<td></td>
</tr>
</tbody>
</table>

   *Table 5-16: Encoded Day of Week*

5. Press Enter to save and exit.
Manage Text

To Change Font Case

The required message can contain both upper and lower case characters. The keys on the keypad that control the case of the entered characters are shown in Table 5-17.

<table>
<thead>
<tr>
<th>Key</th>
<th>Function</th>
</tr>
</thead>
<tbody>
<tr>
<td>caps</td>
<td>The Caps Key changes the case of the next character entered.</td>
</tr>
<tr>
<td>lock</td>
<td>The Caps Lock key changes the default case.</td>
</tr>
</tbody>
</table>

Table 5-17: The keys to Change the Case of the Fonts

To Set Font Height

You can change the height of the font in a message and can have more than one size in a message. The number of lines in a message depends on the size of the font selected and the model of the printer. Refer to “Font Specifications and Line Speeds” on page A-9 for more information.

Press the F1 key until you get the required height of the font (see Figure 5-47).

Figure 5-47: Select Font Height
Do the following tasks to set the height of the font from the Editor menu.

1. Press the $\text{Alt}+\text{E}$ keys or press F1. The Editor menu appears (see Figure 5-48 on page 5-57).

2. Select the Select Font option. The Select Font menu appears. Use the Up and Down arrow keys to select the height of the font.

3. Select the font height, and press the Enter key.
To Select Content

The editor automatically selects the block of text that you enter. This feature is referred to as *Default Text Selection* (Figure 5-50). If this feature is not available, the message *No Text Selected* appears in that area.

Press `Ctrl` + `Left arrow key` or `Ctrl` + `Right arrow key` key to highlight the required text.
To Copy and Paste Text

You can copy some text to the clipboard and paste the text in a different area.

To Copy Text

Do the following tasks to copy the text.

1. Press the $\text{Alt}+\text{M}$ keys. The Messages menu appears.
2. Select Edit Message. The Select Message To Edit dialog box appears (see Figure 5-51).
3. Select the message and press the $\text{Enter}$ key. The message editor screen appears.
4. Press the $\text{Ctrl} + \text{Left arrow}$ key or $\text{Ctrl} + \text{Right arrow}$ key to highlight the required text.
5. Press the keys $\text{Alt}+\text{E}$ to open the Editor menu.
6. Select Copy Text from the Editor menu.

Figure 5-51: Edit Message Option

Figure 5-52: Copy Text Option
**To Paste Text**

Do the following tasks to paste the text:

1. Follow from Step 1 to Step 3 under the section “To Copy Text” on page 5-59 to access the Editor screen.
2. Set the cursor at the point in the message where you require to paste the text.
3. Press the keys Alt+E to open the Editor menu.
4. Select the option Paste Text from the Editor menu.

![Paste Text Option](image)

**Figure 5-53: Paste Text Option**

**To Modify Text Attributes**

There are two methods to change the text attributes:

- Modify Attributes - The *Modify Attributes* option allows the operator to change the attributes of the selected content displayed in the editor screen (refer to “To Modify Attributes” on page 5-61).

The different attributes are recorded in Table 5-18.

<table>
<thead>
<tr>
<th>Options</th>
<th>Functions</th>
<th>Example</th>
</tr>
</thead>
<tbody>
<tr>
<td>Invert</td>
<td>Turns the text upside down.</td>
<td>TEXT \text{upside down}</td>
</tr>
<tr>
<td>Reverse</td>
<td>Turns the text back to front.</td>
<td>TEXT \text{back to front}</td>
</tr>
<tr>
<td>Font Type</td>
<td>Sets the type of font (custom, narrow and normal) and is available for 7 and 9 high fonts.</td>
<td>-</td>
</tr>
</tbody>
</table>

*Table 5-18: Options to Modify Attributes*
To Modify Attributes

**Note:** You can apply more than one attribute to the selected content.

Do the following tasks to change the text attributes:

1. Select the content in the menu editor. You can select the text in the following methods:
   a. Set the cursor at the required position in the text and press the *Enter* key.
   b. Press the *Ctrl* + *Left arrow key*, or *Ctrl* + *Right arrow key* to highlight the required text.

<table>
<thead>
<tr>
<th>Options</th>
<th>Functions</th>
<th>Example</th>
</tr>
</thead>
</table>
| Double Dot    | Each raster of selected text is made to print two times that forms bolder character. Example: See “Bold Text” in the illustration. | ![Normal Text](normal)
|               |                                                                           | ![Bold Text](bold)                          |
| Triple Dot    | Each raster of selected text is made to print three times to make the character very bolder. Example: See “Very Bold Text” in the illustration. | ![Inverse Video](inverse)
| Inverse Video | Inverts the colour to black or white for opaque printing. Used for reverse image barcodes. | ![Inverse Video](inverse)
| Barcode       | Turns the inserted text into the format of the required barcode.          | ![Barcode](barcode)                         |
| Check sum     | A check sum is a value used to make sure data is stored or transmitted without an error. If the check sum option is enabled, the system creates this digit automatically. Example: The last digit of the bar code is an optional check sum digit. | ![Check sum](check)
| Human Readable| Allows the human readable portion of the barcode data to be printed below the barcode or turned off. | ![Human Readable](human)
| Datamatrix Density | Use this option to set the size for the Data Matrix symbol. | ![Datamatrix Density](datamatrix) |

*Table 5-18: Options to Modify Attributes (Continued)*
2 Press the F3 key to open the Editor Attributes screen. You can adjust the attributes of the selected text.

![Editor Attributes Menu](image)

*Figure 5-54: Editor Attributes Menu*

3 Press the *Up arrow* key or the *Down arrow* key until the required attribute is selected (shown by the cursor under the first letter of the attribute name).

4 Press the *Right arrow* key to select the attribute, and press the *Left arrow* key to cancel the attribute.

   You can also use the space bar to select or cancel the attributes.

5 When all the required attributes are set, press the *Enter* key to save the settings and return to the Message Editor.

**To Insert a Barcode**

Do the following tasks to insert a Barcode:

*Note: Refer to “Barcode Specifications” on page A-12 for more information on the type of barcodes that are allowed.*

1 Press the *F1* key until the size of the font for the barcode you require is displayed.

   *Note: When the height of barcode is less than 16 drops, the printer does not allow the operator to print human readable elements of barcodes.*

2 Press the *F3* key or *ALT+E* and select *In-line Attributes* to open the *Editor Attributes* screen (see Figure 5-55 on page 5-63).

3 Use the *Up arrow* and *Down arrow* keys to highlight the *Barcode* option.
4 Use the Right arrow key or Left arrow key to select the required barcode.

![Editor Attributes]

Figure 5-55: Select the Type of Barcode

5 If you require to include a check sum for error correction in the barcode, then use the Right arrow key or Left arrow key to select the box.

*Note:* If you cannot highlight the check sum now, the current setting is necessary for the type of barcode selected.

6 If you require a human readable version of the barcode to appear under the barcode, press the Right arrow or Left arrow key to select the following options on the Human Readable attribute:

- None
- Small
- Large
- Huge

*Note:* You can select human readable fonts sizes between 5 high and 7 high. For the stitched barcodes, a 9 high font is available.

7 Press the Enter key to save the barcode and exit the Editor Attributes screen.
8 Enter the barcode data at the cursor. A graphical representation of the barcode now appears in the Message Editor window.

For example, you can see some useful information about the input allowed for the type of barcode (EAN-8) selected.

![Bar Code](image)

Figure 5-56: Bar Code

**Note:** You can insert a user field into a barcode if all the characters in this field are valid for the type of barcode.

9 Finish the barcode edition and move the cursor away with the *Left arrow* or *Right arrow* key.

### To Insert Foreign Language Characters

You can include the characters from more than one language alphabet in a message.

Do the following tasks to insert foreign language characters:

1 Follow Step 1 to Step 4 under the section “To Create a Message” on page 5-24 to open the Message Editor screen.

2 Press the *Alt+E* keys to open the Editor menu.

3 Select *Set Keyboard Type* from the Editor menu. The *Select Kbd Type* menu appears.

![Select Kbd Type](image)

Figure 5-57: Select Keyboard Type Menu
Note: If the required keyboard type is not shown, you must change the Editor Font Group. You must change before the jet is started, because the change to the Editor Font Group always includes a power cycle.

4 Select the required type of keyboard from those available and press the Enter key. The Message Editor screen appears.

    Note: You can use the alphabet of the selected language in the message that is edited.

Repeat the procedure to return to the original keyboard after you enter the special characters.

Manage Logos

To Download a Logo

Logos can be downloaded using a USB stick, but make sure that the file format is monochrome bitmap file.

When you download a logo, the printer prompts with the following message:

“The logo editor is opened and the UI displays the logo with assigned file name.”

Note: The logo will be clipped at the top or bottom, if it is more than 34 dots high (for 1620) and 16 dots high (for 1620 UHS).

You can edit the logo on the printer, or use the Shift + F1 option to save the logo with the same name. The logo is available under the User Fields to insert into the messages.

Note: If you try to download a type of file (or folder) which does not match the file types, in the above table, the printer displays the following if the Enter key is pressed "Unsupported File Type".
To Create a Logo in Microsoft Paint Application

1. Open the Microsoft Paint application. A new page opens by default.

2. Navigate to View > Zoom > Custom. The Custom Zoom (Figure 5-58) dialog box appears.

3. Select 800% under Zoom to. Click the OK button.

4. Navigate to View > Zoom > Show Grid to activate the grid for the page.

5. Navigate to Image > Attributes to set the size of the message. Set the necessary message size. This menu allows the user to:
   a. Verify the format of the existing messages.
   b. Pre-set the message size to avoid editing the image later
   c. Select the colour format of the image as Black and White. (See Figure 5-59)

6. Create the required logo on the page (see Figure 5-60).
**Note:** If the logo size is bigger than required, navigate to Image > Stretch/Skew. Enter the appropriate values to stretch/skew the images in vertical and horizontal directions (Figure 5-61). Ensure to enter equal values in horizontal and vertical columns.

![Stretch and Skew](image)

*Figure 5-61: Image stretch and skew*

7. Save the created logo as monochrome bitmap file in the USB.

8. Insert the USB drive into the USB port on the printer.

![Files on USB drive](image)

10. Press the Enter Key and the logo appears on the menu screen (see Figure 5-62).

![Logo on Menu Screen](image)

*Figure 5-62: Logo on Menu Screen*

**Note:** Make sure that the Height and Font values are not set at Zero.
To Use the Logo Editor Menu

Press Alt+E (Editor menu) in the Logo Editor screen to display the Logo Editor menu.

![Logo Editor Menu]

This menu contains the following options:

**To Set Logo Size**

You can change the size of the logo after you insert the logo.

Use the keys shown in the Table 5-19 to change the size of the logo:

<table>
<thead>
<tr>
<th>Keys used</th>
<th>Setting</th>
</tr>
</thead>
<tbody>
<tr>
<td>or and</td>
<td>Adjust the width of the logo one dot at a time. Adjust the height of the logo one dot at a time.</td>
</tr>
<tr>
<td>or</td>
<td></td>
</tr>
<tr>
<td>+</td>
<td>Adjust the logo size ten dots at a time.</td>
</tr>
</tbody>
</table>

*Table 5-19: Setting Logo Size*
Do the following tasks to crop a graphic:

1. Press the Enter key and a frame appears that shows the current boundaries of the graphic (see Figure 5-64).

![Figure 5-64: Crop Logo](image)

2. Adjust the size of the frame with a combination of controls, until boundaries of the graphic are as required. Refer to Table 5-20 on page 5-69 for the controls used and their functions.

**Set Block**

Sets a block over the logo editor screen that you can move and change the size. You can cut, paste, or delete the text or graphics enclosed by the block.

![Figure 5-65: Logo Editor](image)

Press the following keys to adjust the block:

<table>
<thead>
<tr>
<th>Keys</th>
<th>Setting</th>
</tr>
</thead>
<tbody>
<tr>
<td><code>Ctrl</code> +</td>
<td>Move the right-hand edge.</td>
</tr>
<tr>
<td></td>
<td>or <code>&gt;</code></td>
</tr>
<tr>
<td><code>Shift</code> +</td>
<td>Move the left-hand edge</td>
</tr>
<tr>
<td></td>
<td>or <code>&lt;</code></td>
</tr>
<tr>
<td><code>Shift</code> +</td>
<td>Move the top edge.</td>
</tr>
<tr>
<td></td>
<td>or <code>↑</code></td>
</tr>
</tbody>
</table>

*Table 5-20: Set Block*
Press the Enter key to set the position and size of the block. The outer line of the block disappears from the screen.

**Set Cursor**

The cursor returns to a single pixel mode instead of a block.

**Delete Block**

Deletes any text or graphics within the area of the block.

**Copy Block**

This function copies any text or graphics within the area of the block and saves the information to the clip board.

**Paste Block**

Inserts the contents of the clip board at the cursor position.

**Select Font**

Selects the height of the font for use when you combine the text with a logo.

Press the F1 key to select the option Select Font.

**Insert User Field**

Allows the user to combine a user field with a logo.

Press the F2 key to select the option Insert User Field.

**Set Keyboard Type**

Displays the languages available for the keyboard. To select a keyboard type, highlight and press the Enter key. The message is edited now using the selected keyboard type.

**Save**

Saves the logo to the memory and the program remains in the Logo editor screen.

**Save and Exit**

Saves the logo in the memory and returns to the previous screen. Press Shift + F1 to select the option of Save and Exit.

### Table 5-20: Set Block (Continued)

<table>
<thead>
<tr>
<th>Keys</th>
<th>Setting</th>
</tr>
</thead>
<tbody>
<tr>
<td>Ctrl + Up or Down</td>
<td>Move the bottom edge.</td>
</tr>
<tr>
<td>Left, Right, Up or Down</td>
<td>Move the whole block by one dot at a time.</td>
</tr>
<tr>
<td>Shift + Left or Right</td>
<td>Move the whole block by ten dots at a time.</td>
</tr>
</tbody>
</table>
Clear Logo

Removes the logo that is edited at this time or created from the Logo Editor screen.

Abandon

Leaves the logo edition activity without saving any changes, and returns to the Message Editor Screen.
Introduction

The maintenance of the printer includes the procedures that an operator or a service technician can perform. This chapter describes the maintenance tasks that the operators of the printer are allowed to perform. The other maintenance tasks that only the trained service technicians and personnel must perform are described in the Service Manual.

⚠️ Warning

PERSONAL INJURY. It is possible that in a fault condition, the heater can reach 70° C. Do not touch the plate on which the heater is installed. The failure to follow this warning can cause personal injury.
Maintenance Schedule

Table 6-1 shows the maintenance schedule.

<table>
<thead>
<tr>
<th>Interval</th>
<th>Task</th>
</tr>
</thead>
<tbody>
<tr>
<td>When the printer is commissioned or if the make-up cartridges are empty</td>
<td>Replace the smart cartridge. Refer “Replace Smart Cartridges” on page 6-4.</td>
</tr>
<tr>
<td>As Required</td>
<td>Clean the following parts of the printhead:</td>
</tr>
<tr>
<td></td>
<td>• Deflector Plate</td>
</tr>
<tr>
<td></td>
<td>• Gutter</td>
</tr>
<tr>
<td></td>
<td><strong>Note:</strong> <em>Check the quality of the print before you do the maintenance.</em></td>
</tr>
<tr>
<td></td>
<td>Refer “Inspect the Printhead” on page 6-7, and “Clean the Printhead” on page 6-7.</td>
</tr>
<tr>
<td></td>
<td>Clean the printer cabinet.</td>
</tr>
<tr>
<td>Every 2000 Hours</td>
<td>Replace the back filter.</td>
</tr>
</tbody>
</table>

Table 6-1: Maintenance Schedule

Preparation for Long-term Shutdown (Storage) or Transportation

*Note:* *Long term Shutdown procedure should be used when the printer will not be used for more than three months.*

Parts/tools Requirement

<table>
<thead>
<tr>
<th>Parts/Tool</th>
<th>Quantity</th>
<th>Part Number</th>

<td>1</td>
<td>399247</td>
</tr>
</tbody>
</table>

Table 6-2: Parts and Tools
How to Prepare for Long-term Shutdown (Storage) or Transportation

Do the following tasks to prepare the printer for long-term shutdown/transportation:

1. Perform a Clean Stop.

2. Run three nozzle flushes.

3. Remove the Nozzle Manifold, and attach the Nozzle Bypass Manifold (with gasket) to it. Perform Empty Core Procedure.

   Note: Printhead needs to be placed over a wash station or a suitable container to capture any overspill.

4. After core procedure completes, run the Flush Ink Core procedure and follow the printer instructions.

   Note: The total time to complete this process is approximately three hours. It will require four sets of cartridges, each cartridge set is attached for 30 to 45 minutes. Each set, upon completion, will be half full with mixed fluids.

5. Remove the Nozzle Bypass Manifold and fix the Nozzle Manifold with the gasket from the print engine deck.

   The printer is now ready for storage or transportation.

Note: When the ink core has been refilled with the ink removed for storage, do not recalibrate viscosity on re-install as the calibration data has been saved.

Note: While preparing the printer for long term shutdown, for level 3 password, please contact Videojet Technologies Inc. at 1-800-843-3610 (for all customers within the United States). Outside the U.S., you should contact your Videojet Technologies Inc. distributor or subsidiary for assistance. Alternatively, you can visit www.videojet.com > Support > Videojet Password Generator.
Replace Smart Cartridges

There are two types of smart cartridges:

- Ink cartridge
- Make-up fluid cartridge

The user has to install the cartridges when the printer is commissioned or when the cartridges are empty. The type of fluid (ink or make-up fluid) is written on the cartridge labels.

To add or replace the cartridges, do the following tasks:

1. Open the door of the ink compartment, and keep the door in the position shown in the Figure 6-1.

2. If the ink and make-up fluid cartridge indicators show empty status , go to step 4.

3. If the ink or make-up fluid cartridge is not loaded icon appears , go to step 5.
**Warning**

PERSONAL INJURY. All fluids like the ink, solvent and make-up fluid are volatile and flammable. They must be stored and handled according to the local regulations. Work only in areas with good ventilation. The cleaning solution is poisonous if taken internally. Do not drink. Seek medical attention immediately if ingested.

4. Pull the old ink cartridge (item 1, Figure 6-2) and the old make-up fluid cartridge (item 2) out of the printer cabinet.

*Note:* Shake the ink cartridge before inserting it into the printer.

5. Insert the new ink cartridge into the ink cartridge holder by aligning the cartridge key with the correct holder slot (see Figure 6-3 on page 6-6).

   a. Make sure that the cartridge is engaged completely in the holder.

   *Note:* Push the cartridge until the cartridge locks into the cartridge holder (that is till you hear a snap sound).
b. Make sure that the icon that indicates “ink cartridge not loaded”
disappears. The icon can take some seconds to disappear.

c. Make sure that the cartridge level indicator 100% full

appears.

Figure 6-3: Cartridge Holder Slot

6 Insert the new make-up fluid cartridge into the make-up fluid
cartridge holder by aligning the cartridge key with the correct holder
slot.

a. Make sure that the cartridge is engaged completely on the holder.

b. Make sure that the icon that indicates “make-up fluid cartridge not
loaded” disappears. The icon can take some seconds to disappear.

c. Make sure that the icon that indicates “cartridge level 100% full”

appears.
Inspect the Printhead

Do the following tasks to inspect the printhead:

1. Stop the ink jet and wait for the printer to completely shutdown.
2. Disconnect the printer from the power supply.
3. Loosen the printhead screw (item 2, Figure 6-4 on page 6-9 (Videojet 1620) and Figure 6-5 on page 6-9 (Videojet 1620 UHS)) and remove the printhead cover (item 3).
4. Inspect the printhead and the inside of the printhead cover for any ink deposits. Clean if necessary (refer “Clean the Printhead” on page 6-7).

Clean the Printhead

⚠️ Warning

PERSONAL INJURY. In the event of an ink or solvent spill, leakage from the printer could cause a floor/slip hazard and/or fire hazard (particularly if the equipment is situated over flammable material and/or other equipment). An optional drip tray is available (Part Number 234407). To install, place the drip tray on surface that the printer is to be used. Place the printer in the centre of the drip tray. Ensure that the drip tray is appropriately grounded to avoid static build up.

⚠️ Warning

VAPOUR HAZARD. Prolonged breathing of cleaning solution vapor can cause drowsiness and/or effects like alcoholic intoxication. Use only in well ventilated, open areas.
**Warning**

HANDLING CLEANING SOLUTION. The cleaning solution is irritating to the eyes and respiratory system. To prevent personal injury when handling this substance:

Always wear protective rubber gloves and clothing.

Always wear goggles with side-shields or a face mask. It is also advisable to wear safety glasses when carrying out maintenance.

Apply barrier hand cream before handling ink.

If cleaning solution contaminates the skin, rinse off with running water for at least 15 minutes.

**Warning**

FIRE AND HEALTH HAZARD. The cleaning solution is volatile and flammable. It must be stored and handled in accordance with local regulations.

Do not smoke or use a naked flame in the vicinity of the cleaning solution.

Immediately after use remove any tissues or cloth that are saturated with cleaning solution. Dispose off all such items in accordance with local regulations.

**Caution**

EQUIPMENT DAMAGE. To prevent the damage to the printer components, use only soft brushes and lint free cloths to clean the printer. Do not use high-pressure air, cotton waste or abrasive materials.

**Caution**

EQUIPMENT DAMAGE. Make sure that the cleaning solution is compatible with the ink used before you clean the printhead. The failure to follow the caution can damage the printer.
Note: Make sure that the jet is turned off.

Figure 6-4: Printhead (Videojet 1620)

Figure 6-5: Printhead (Videojet 1620 UHS)
1. Put the printhead into the wash station (part number 399085).

2. Use a cleaning agent and a tissue or a soft brush to clean the following parts of the printhead:
   - Gutter Sensing Tube (item 6, Figure 6-4 (Videojet 1620) and Figure 6-5 on page 6-9 (Videojet 1620 UHS))
   - Charge electrode (item 7)
   - Deflector plate (item 5) (see “Clean the Deflector Plate” on page 6-11)
   - Nozzle (item 4)

   **Note:** The cleaning agent must be compatible with the type of ink that you use in the printer.

3. Allow the printhead to dry and make sure that the slot in the charge electrode is free of cleaning agent.

   **Note:** Use a hand blower or compressed air to dry the printhead quickly. The air pressure must not be more than 20 psi.

   **Caution**

   EQUIPMENT DAMAGE. The printhead must be dry before you try to start the printer. The failure to follow this caution can damage the printhead.

4. Refit the printhead cover and tighten the knurled screw.
Clean the Deflector Plate

To prevent the deposits of ink, clean the contoured surfaces of the deflector plate with the solvent, and clean dry air (CDA).

Figure 6-6: Clean the Deflector Plate (Videojet 1620)

Figure 6-7: Clean the Deflector Plate (Videojet 1620 UHS - 50 Micron)
Clean the Printer Cabinet

To clean the printer cabinet, do the following tasks:

**Warning**

PERSONAL INJURY. Airborne particles and materials are a health hazard. Do not use high-pressure compressed air to clean the printer cabinet.

**Caution**

EQUIPMENT DAMAGE. Any cleaning solutions containing either chloride, including hypochlorite bleaches or hydrochloric acid, can cause unacceptable surface pitting and staining. These should not be used in contact with stainless steels. If wire brushes or wire scouring pads are used, these should be made of stainless steel. Make sure that any abrasive media used is free from sources of contamination, especially iron and chlorides.

1. Remove the dust from the printer with a vacuum cleaner, or soft brush.
2. Clean the outer surfaces of the printer with a wet lint free cloth. Use a mild detergent to remove the contamination that you cannot remove by a wet cloth.
Introduction

This chapter contains the troubleshooting and fault diagnosis information for the everyday users of the printer.

The service manual has more information on troubleshooting for the service technician and trained personnel.

Warning

LETHAL VOLTAGES. Lethal voltages are present within this equipment when the equipment is connected to the main electrical supply. Only trained and authorised personnel must do the maintenance work. Observe all statutory electrical safety codes and practices. Unless it is necessary to run the printer, disconnect the printer from the main electrical supply before you remove the covers or do any service or repair activity. The failure to follow this warning can cause death or personal injury.

Warning

PERSONAL INJURY. It is possible that in a fault condition the heater can reach 70°C. Do not touch the plate on which heater is installed. The failure to follow this warning can cause the personal injury.
The Printer Does Not Start

1. Make sure that the printer is turned on. To turn on the printer, press the green push button.

2. Check the system status LEDs (see Table 7-1) to see if a system fault has occurred or if the user interference is required.

<table>
<thead>
<tr>
<th>Illuminated</th>
<th>Diagnosis</th>
</tr>
</thead>
<tbody>
<tr>
<td>RED</td>
<td>Any fault that prevents the printing. For example, jet not running, deflector plate trip.</td>
</tr>
<tr>
<td>AMBER and GREEN</td>
<td>The printer requires user interference to prevent a system fault. For example, ink or make-up fluid low</td>
</tr>
<tr>
<td>GREEN</td>
<td>The printer can print correctly</td>
</tr>
</tbody>
</table>

*Table 7-1: System Status LEDs*

3. If the red or amber LEDs are illuminated, inspect the display to see that icons and related message are displayed. Refer to “Printer Status Icons” on page 7-7.

4. If the green LED is illuminated, and the printer does not print:
   - Make sure that the product sensor and shaft encoder are connected and correctly operating (a lamp found behind the product sensor must flash if a product passes the sensor).
   - If the problem continues, report the fault to VTI @ 1-800-843-3610 (within United States only). The customers outside the US must contact a Videojet subsidiary office or the local Videojet distributor.

5. If the system status LEDs do not illuminate, check the main electrical supply as follows:
   a. Make sure that the main electrical supply is available.
   b. Make sure that the main input connector is fitted correctly.
   c. Make sure that the main power supply button is in the ON position (looks pressed in).
   d. If the problem continues, report the fault to VTI @ 1-800-843-3610.
Incorrect Print Position

1. Make sure that the Product Delay value set in the Message Parameters menu is correct. See “To Set the Message and Default Parameters” on page 5-28.

![Distance from Edge Diagram](image)

*Figure 7-1: Print Position*

2. Make sure that there are no additional spaces at the start of the message.

Incorrect Print Size

1. Make sure that the set character height is correct. Refer to “To Set Font Height” on page 5-56.

2. Make sure that the distance from the printhead to the product is correct. The character height increases and resolution decreases as the printhead moves away from the product.

*Note:* The optimal distance from the printhead to the product for the best quality is 12 mm. The range is 5 to 15 mm.

*Note:* For 1620 UHS 40 micron printer, the optimal distance from the printhead to the product for the best quality is 6 mm.

*Note:* Special rasters are available for specific applications for which the optimal distance will vary depending on the application. These rasters should be used on applications with a print height of 10 only.
3 Make sure that the correct font is selected in the message. Refer to “To Edit a Message” on page 5-25.

Note: Refer to Table A-6 on page A-8 for information on the print height.

4 If the message width appears stretched, decrease the width value set in the Message Parameters menu. Refer to “To Set the Message and Default Parameters” on page 5-28.

5 If the message width appears compressed, increase the Width value set in the Message Parameters menu.

Print Not Complete

1 Make sure that the Max Printed Dots value set in the Message Parameters menu is equal to the maximum number of dots required for a raster/ stroke (depends on the model). Refer to “To Set the Message and Default Parameters” on page 5-28. Refer to Appendix A, “Specifications” for more information on the different models of the printer.

2 You must check for any ink deposits on the printhead and clean the printhead if necessary. Refer to “Clean the Printhead” on page 6-7.
Poor Print Quality

The example on the left shows good overall character formation, no stray drops and an even application of print.

Table 7-2 describes the samples of bad printing, their causes and the steps required to correct the fault.

<table>
<thead>
<tr>
<th>Sample and Cause</th>
<th>Remedy</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>Jet not aligned correctly, or nozzle has a partial block. Note bottom drops clipping the edge of the gutter. Possible EHT too low.</strong></td>
<td>Clean the printhead. Perform the nozzle flush procedure, wash the nozzle with wash down. Make sure that the gutter is clean.</td>
</tr>
<tr>
<td><strong>Phasing error. The correct placement of drop is not good. You see a good amount of splashing in the area around.</strong></td>
<td>Clean and completely dry the printhead. Make sure there is enough time available between prints to phase.</td>
</tr>
<tr>
<td><strong>Incorrect modulation, too many satellites, charging process not correct.</strong></td>
<td>Backflush nozzle and check for correct breakup.</td>
</tr>
<tr>
<td><strong>Pressure too high, drops not deflected correctly, drops &quot;run in&quot; to one another, small print.</strong></td>
<td>Check for jet alignment. Refer to the service manual for more information.</td>
</tr>
<tr>
<td><strong>Pressure too low, the drops are over-deflected or incorrectly positioned. Possible loss of most deflected drops.</strong></td>
<td>Check for jet alignment. Refer to the service manual for more information.</td>
</tr>
</tbody>
</table>

*Table 7-2: Samples of Bad Printing*
<table>
<thead>
<tr>
<th>Sample and Cause</th>
<th>Remedy</th>
</tr>
</thead>
<tbody>
<tr>
<td>Printhead too far from the substrate. The drops are affected by air currents and are spaced too far apart vertically.</td>
<td>Decrease the distance from the substrate, or select a more correct font.</td>
</tr>
<tr>
<td>Printhead slot not vertical to the substrate travel.</td>
<td>The face of the printhead must be at 90 degrees angle to the surface of the substrate and the slot must be vertical to the substrate movement. Refer to the figure below.</td>
</tr>
</tbody>
</table>

*Table 7-2: Samples of Bad Printing (Continued)*
Printer Status Icons

The printer status icons are divided into three groups:

- The indicator icons. The indicator icons show the status of the ink jet.
- The fault (alarm) icons. When a fault condition occurs, the prints stops printing.
- The warning icons. When a warning condition occurs, the printer continues to print until the warning condition becomes a fault condition.

Indicator Icons

<table>
<thead>
<tr>
<th>Icon</th>
<th>Name</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>![Jet Running Icon]</td>
<td>Jet Running</td>
<td>The ink jet is running and the machine is ready to print. When the machine starts, the icon flashes.</td>
</tr>
<tr>
<td>![Jet Stopped Icon]</td>
<td>Jet Stopped</td>
<td>Indicates that the ink jet is stopped.</td>
</tr>
</tbody>
</table>

*Table 7-3: Indicator Icons*

Fault (Alarm) Icons

<table>
<thead>
<tr>
<th>Icon</th>
<th>Name</th>
<th>Remedial Action</th>
</tr>
</thead>
<tbody>
<tr>
<td>![EHT Trip Icon]</td>
<td>EHT Trip</td>
<td>The deflector plate arcing is sensed. Clean the deflector electrodes, within the printhead. If this action does not correct the fault, contact Videojet maintenance engineer.</td>
</tr>
<tr>
<td>![Gutter Fault Icon]</td>
<td>Gutter Fault</td>
<td>Ink is not entering the gutter. Back flush the nozzle. If this action does not correct the fault, report the fault to Videojet maintenance engineer.</td>
</tr>
</tbody>
</table>

Table A-9: UHS Line Speeds - 40 Micron

Note: * Rasters are speed dependent.

Note: + indicates speed at 75dpi.
Barcode Specifications

The available barcode types are shown in Table A-10.

Note: Barcode specification and Data Matrix are listed in the Table A-10 and Table A-11. Barcodes run at single line speed based on height selected at 60 dpi and 90 dpi.

Table A-11: Data Matrix Code Sizes (Continued)

**Note:** The 60 Micron Nozzle is recommended to print datamatrix codes at 16 high or taller.
Character Set
The character sets are a combination of number of different language alphabets and special text characters that are programmed in the printer.

Charge
The electrical charge that is applied to the small drops of ink. The amount of charge applied depends on the destination of the drop on the substrate.

CIJ
In the CIJ technology a continuous stream of ink breaks into small ink drops, and these ink drops are deflected to form the characters and images on the substrate.

Clean Start
Clean start is a printer start sequence which removes the splashing of ink and spray during the startup. This startup sequence is used if Clean Stop was used earlier to stop the printing.

Clean Stop
Clean Stop feature provides the required time to remove the ink from the manifold and nozzle before the ink jet stops. This action prevents any deposits of ink on the printhead. A clean printer operates correctly for longer periods of time.

Deflector Plate
The deflector plate creates a high voltage field in the printhead. The high voltage field deflects ink droplets for printing. You can change the voltage in the deflector plate to control the character height.

Gutter
The ink not used by the printhead returns through the gutter.

Icon
A graphical symbol used to indicate a printer state or error condition.

LCD
LCD is a thin, flat display device made up of any number of color or monochrome pixels arrayed in front of a light source or reflector.

LED
LED is a semiconductor device that emits visible light when an electric current passes through it.

Message Select
The method to select the message from an external source and not through the keypad. External source like the Programmable Logic Controller (PLC) or a switch box.
Nozzle
Ink is supplied to the nozzle assembly and pushed through a small orifice. The nozzle assembly is made to vibrate to break the ink jet into a continuous stream of small drops of ink.

Parameters
The settings which are applied to the message that is printed. For example, message width.

Phasing
The microprocessor control system of the printer monitors the data from the phase detector. This data make sure that there is synchronization between the charging of small ink drops and their break up.

Photocell
A light activated switch that detects the presence of the product to start the printing.

Product Detector: Photocell

Product Delay
The product delay is the time from when the photocell is activated and the message begins to print.

Quick Start
Quick Start is used if the machine is turned off for only less than 30 minutes. This start mode of the printer is used where the nozzle is not flushed.

Quick Stop
Quick Stop is used if the machine will be off for less than 30 minutes. This type of stop mode of the printer is used where the nozzle is full of ink.

RS-232
Serial data communications standard which enables the communication between the printer and other devices.

Satellites
Small additional drops of ink in the ink stream caused by incorrect modulation settings.

Shaft Encoder
A device that senses the changes in the product speed and enables the printer to adjust the print width.

Substrate
The product surface where the printing occurs.
User Fields
A user field is inserted into a message. The user field is copied into the message during the print operation only, so that the user field includes the new updates. (For example, expiry date).

Valve
The hydraulic component in the Videojet 1620/1620 UHS printer to control the flow of ink within the printer.

Washdown
A cleaning solution which cleans the printhead and removes any additional deposits of ink.

WYSIWYG
WYSIWYG is an acronym for What You See Is What You Get, used in computing to describe a system in which content displayed during editing appears very similar to the final output (in this case, characters and images printed on the substrate).
